

Modular electrical terminal CPX

FESTO

Terminal CPX

Key features

FESTO

Key features

Installation concept	Electrical components	Assembly	Operation
- Choice of several valve terminal types for different applications: – MIDI/MAXI – CPA – MPA-S – MPA-F – MPA-L - Economical from the smallest configuration up to the maximum number of modules - Up to 9 electrical input/output modules plus bus nodes and pneumatic interface/electronic modules for valves - Extensive range of functions and connection options for the electrical modules - Choice of connection technology for technically and economically optimised connections - Can be used as a dedicated remote I/O module	- High operating voltage tolerance ($\pm 25\%$) - Choice of M18, 7/8" or AIDA push-pull connection for power supply - Open to all fieldbus protocols and Ethernet - Optional function and technology modules for preprocessing - IT services and TCP/IP such as remote maintenance, remote diagnostics, web server, text message and e-mail alert - Digital inputs and outputs, 4-/8-/16-way, optionally available with individual channel diagnostics - Analogue inputs and outputs, 2-/4-way - Pressure inputs - Temperature inputs - Controllers for pneumatic and electrical axes - IP65 and IP67 or IP20	- Wall or H-rail mounting, also on mobile systems - Conversions/extensions are possible at any time, individual linking with CPX metal design - Modular system offering a range of configuration options - Fully assembled and tested unit - Lower selection, ordering, assembly and commissioning costs thanks to the central CPX terminal - Choice of pneumatic components for optimised control loop system design - Decentralised, subordinate CPI installation system improves cycle times by up to 30% - Safe and convenient earthing thanks to earthing plate	- Fast troubleshooting thanks to an extensive selection of LEDs (some of which are multi-coloured) on the bus node and on all I/O modules - Supports module and channel-oriented diagnostics - On-the-spot diagnostics in plain text via handheld device - Fieldbus/Ethernet remote diagnostics - Innovative diagnostic support with integrated web server/web monitor or maintenance tool with USB adapter for PC - Optimised commissioning thanks to parameterisable functions - Reliability of service with connection blocks and modules that are quick to replace without changing the wiring

Terminal CPX

Key features

FESTO

Pneumatic variants of the CPX terminal

The electrical CPX terminal is a modular peripheral system for valve terminals.

The system is specifically designed so that the valve terminal can be adapted to suit different applications.

The modular system design lets you configure the number of valves, inputs and additional outputs to suit the application.

With valve terminal – decentralised

With valve terminal MPA-S – centralised

With valve terminal VTSA – centralised

In metal design with valve terminal VTSA – centralised

With valve terminal MIDI/MAXI – centralised

With valve terminal CPA – centralised

Terminal CPX

Key features

FESTO

Variants of the CPX terminal controller (with bus node, without preprocessing)

Bus node

Different bus nodes are used to integrate the terminal in the control systems of various manufacturers. The CPX terminal can therefore be operated on over 90% of the most commonly used fieldbus systems:

- PROFIBUS DP
- PROFINET
- INTERBUS

- DeviceNet
- CANopen
- CC-Link

Integration in universal networks based on Ethernet opens up new possibilities. Faster data transmission, real-time capability and above all additional IT services such

as file transfer, web server, web monitor as integrated website in the CPX terminal, text message/e-mail alerts, etc. open up a wide range of synergies.

These include standardised and universal communication technology across all areas, including operating

level, management level and field level in the production environment, with protection to IP65/67.

The following protocols are supported:

- EtherNet/IP
- Modbus/TCP
- PROFINET
- EtherCAT

Bus node

- Communication with higher-order controller via fieldbus
- No preprocessing

- Fieldbus protocol dependent on CPX bus node used
- Up to 90 I/Os, depending on the bus node used

Industrial Ethernet bus node

- Connection to a higher-order controller directly via EtherNet/IP, Modbus/TCP or PROFINET
- No preprocessing

- Monitoring via Ethernet and web applications
- Up to 300 I/Os

Note

Every electrical connection can be combined with an appropriate number of I/O modules and/or pneumatic components, depending on its address capacity.

Likewise, every pneumatic variant of the CPX terminal can be operated with every electrical connection variant.

Terminal CPX

Key features

FESTO

Variants of the CPX terminal controller (with preprocessing in the control block)

Control block

The optional Front End Controllers CPX-FEC and CPX-CEC enable simultaneous access via Ethernet and an integrated web server (in the case

of CPX-FEC), in parallel with a bus node, as well as autonomous preprocessing. Access via Modbus/TCP and EasyIP is also possible.

Commissioning, programming and diagnostics using the Festo software tool FST 4.1 with hardware configurator.

With control block in stand-alone mode

- Decentralised controller with direct machine mounting
- Interaction options via CPX-MMI or Front End Display (FED)
- Downloading of programs via Ethernet (or via the programming interface)
- Supports full expansion of all CPX peripherals
- More than 300 I/Os

Beneficial application areas:

- Stand-alone individual workstations
- Interlinked, stand-alone sub-systems
- Automation using IT technology

With control block in Festo EasyIP mode

- Fast preprocessing of the CPX peripherals in the control block
- Exchange of any data between the control blocks via EasyIP
- Operation and monitoring of several control blocks via one FED
- Remote diagnostics

- No higher-order controller is required
- More than 300 I/Os per CPX control block

Key features

Variants of the CPX terminal controller (with preprocessing in the control block)

With control block as remote controller on Ethernet

Remote controller on Ethernet as the preprocessing unit for decentralised,

stand-alone subsystems using IT technology.

- Connection to a higher-order controller via Ethernet, no further bus node is required
- Monitoring via Ethernet and web applications
- Preprocessing of the CPX peripherals by CPX control block
- More than 300 I/Os

With control block as remote controller on the fieldbus

Fieldbus remote controller (combination with bus nodes for Interbus, PROFIBUS DP, PROFINET, CANopen,

DeviceNet, CC-Link or EtherCAT) as the preprocessing unit for decentralised, stand-alone subsystems.

- Fast preprocessing of the CPX peripherals in the control block
- Communication with higher-order controller via fieldbus
- Optional additional monitoring via Ethernet and web applications
- Downloading of programs via programming interface
- More than 300 I/Os, bus node is only used for communication with the higher-order PLC
- Two bus nodes for redundant communication configuration

Terminal CPX

Key features

FESTO

Variants of the CPX terminal controller (with preprocessing in the control block)

With control block as CANopen fieldbus master

Properties:

- Connection to a higher-order controller via Ethernet, no further bus node is required
- Monitoring via Ethernet
- Preprocessing of the CPX peripherals by CPX control block
- More than 300 I/Os
- Up to 128 stations with repeater technology on CANopen

Operating modes:

- Remote controller on Ethernet
- Control block in Festo EasyIP mode

Terminal CPX

Key features

FESTO

Connection of inputs and outputs to the CPX terminal

Digital and analogue CPX I/O modules

Electrical connection

The connection technology for sensors and additional actuators offers a wide range of digital and analogue input and output modules and is freely selectable – as appropriate to your standard or application. Plastic or metal connection blocks can be combined as required:

- Metal design
 - M12-5POL
- Plastic design:
 - M12-5POL
 - M12-5POL with quick lock and metal thread
 - M12-8POL
 - M8-3POL
 - M8-4POL
 - Sub-D
 - Harax®
 - CageClamp® (with cover also to IP65/67)

With CPX-CP interface

- Up to 4 strings per CP interface possible
- Up to 4 subordinate CP modules can be combined in one string

- Up to 32 I/Os can be connected per string
- Modules with M8, M12 and terminal connection

Several CP interface modules can be combined in one CPX terminal (depending on the controller used).

Combination of centralised CPX I/O modules and decentrally mounted I/O modules of the CPI installation system.

Combined centralised and decentralised electrical connection (valve terminal with CP interface/output module)

- Scalable to different requirements within a system
- One control interface in the system, reduces installation complexity with closely and widely spaced actuators
- Enables an optimum electrical and pneumatic control chain

Terminal CPX

Key features

Connection of inputs and outputs to the CPX terminal with CPX-CTEL interface

- Up to 4 devices with individual electronic fuse protection per CPX-CTEL master
- Max. 64 inputs/64 outputs per I-Port interface
- The maximum length of a string is 20 m
- Input modules with 16 digital inputs (3-pin M8 and 5-pin M12 connection technology)
- Valve terminals with I-Port interface (up to 48 solenoid coils, different valve functions)

Several CPX-CTEL masters can be combined in one CPX terminal (depending on the controller used). Combination of central CPX I/O modules and decentrally mounted I/O modules with I-Port interface.

With CPX-CTEL-2 interface

- Up to 2 individual electronically protected IO-Link devices per CPX-CTEL-2 interface
- Max. 16-byte inputs/16-byte outputs per IO-Link device
- The maximum length of a string is 20 m

Several CPX-CTEL-2 interface modules can be combined on one CPX terminal (depending on the controller used). Combination of central CPX I/O modules and decentrally mounted I/O modules with IO-Link interface.

Terminal CPX

Key features

FESTO

Connection of inputs and outputs to the CPX terminal

Electrical drives with CPX-CMXX multi-axis interface

- Two axis groups, each with up to four axes, per CPX-CMXX
- 1,024 positioning records possible per axis group

- 2-axis gantries
- 3-axis gantries

Several CP interface modules can be combined in one CPX terminal (depending on the controller used).

Combination of centralised CPX I/O modules and decentrally mounted I/O modules of the CPI installation system.

Electrical drives with CPX-CM-HPP axis interface

- Max. 4 individual electric axes, per CPX-CM-HPP
- No programming required

- Standardised communication with the drives via the Festo Handling and Positioning Profile (FHPP)

- The control component is independent of the bus node used

- Quick configuration and diagnostics via the operator unit CPX-MMI

Terminal CPX

Key features

FESTO

Connection of inputs and outputs to the CPX terminal

Pneumatic drives with CPX-CMAX/CMPX

CPX-CMAX

- Position and force control, directly actuated or selected from one of 64 configurable positioning profiles.
- Configurable record continuation enables simple functional sequences to be realised.
- The auto-identification function identifies each station with its device data on the controller.
- Actuation of a brake or clamping unit via the proportional directional control valve VPWP.
- Up to 7 modules (max. 7 axes) can be operated in parallel and independently of each other.
- Commissioning via the Festo configuration software FCT or via fieldbus.

CPX-CMPX

- Fast travel between the mechanical end stops of the cylinder, stopping gently and without impact in the end position.
- Fast commissioning via control panel, fieldbus or handheld unit.
- Improved downtime control.
- Actuation of a brake or clamping unit via the proportional directional control valve VPWP.
- Max. 9 end-position controllers can be actuated depending on the fieldbus.
- All system data can be read and written via the fieldbus, including the mid positions, for example.

Ordering

The CPX terminal with valve terminal is fully assembled according to your order specifications and individually tested. The finished valve terminal consists of the electrical peripherals including the desired actuation and the selected components of the VTSA (ISO), VTSA-F, CPA, MPA-S, MPA-F, MPA-L or MIDI/MAXI modules.

The CPX terminal with valve terminal is ordered using two separate order codes. One order code defines the electrical peripherals type CPX, while the other specifies the pneumatic components of the valve terminal. The electrical peripherals type CPX can also be configured without a valve terminal and can be used on a fieldbus. For this order, only the order code for the electrical peripherals is required.

The order lists for the pneumatic components can be found on

- ➔ Internet: vtisa (valve terminal VTSA)
- ➔ Internet: vtisa-f (valve terminal VTSA-F)
- ➔ Internet: cpa10 (valve terminal CPA)
- ➔ Internet: mpa-s (valve terminal MPA-S)
- ➔ Internet: mpa-f (valve terminal MPA-F)
- ➔ Internet: mpa-l (valve terminal MPA-L)
- ➔ Internet: visb (valve terminal VIMP-/VIFB-03)

The order lists for the CP/CPI components can be found on

- ➔ Internet: ctec (CPI installation system)

The order lists for the CTEU/CTEL components can be found on

- ➔ Internet: cteu (I-Port interface/IO-Link)

Complete overview of modules

End plate

- Mounting holes for wall mounting
- Functional earth connection
- Special earthing plate for safe and easy connection to the machine bed or H-rail
- External power supply for the entire system

Bus node

- Fieldbus/Industrial Ethernet connection using various types of connection technology
- Setting of fieldbus parameters via DIL switch
- Display of fieldbus and peripheral equipment status via LED
- PROFINET to AIDA standard in metal housing, fast start-up

Control block

- Pre-processing, stand-alone controller or remote unit CPX-FEC/CPX-CEC
- Connection via Ethernet TCP/IP or Sub-D programming interface
- Setting of operating modes via DIL switch and program selection via rotary switch
- CPX-CMX products for controlling axes

CP interface/CTEL interface

- Interfaces for decentralised installation systems, thus optimising the pneumatic control chains (short tubes/short cycle times)
- Actuation for I/O modules and valve terminals
- Power supply and bus interface via the same cable

Operator unit

- Connection to bus nodes or control block
- Display and modification of parameter settings
- Plain-text display for texts, messages (e.g. individual channel diagnostics, condition monitoring), menus, etc.

Web monitor

- Website integrated in the CPX terminal
- Dynamic status display
- Online diagnostics
- SMS/e-mail alert

Input/output modules

Combination of

- Interlinking block
- Electronics module
- Connection block

Terminal CPX

Peripherals overview

FESTO

Complete overview of modules

Input/output modules

1 Interlinking block

- Internal linking of the power supply and serial communication
- External power supply for the entire system
- Additional power supply for outputs or valves
- Connection accessories for M18, 7/8" or AIDA push-pull
- Plastic design: linking with tie rods
- Metal design: individual linking with M6 screws, individually expandable

2 Electronics module

- Digital inputs for connecting the sensors
- Digital outputs for activating additional actuators
- Analogue inputs
- Temperature inputs (analogue)
- Analogue outputs
- PROFIsafe shut-off module with two digital outputs for shutting off the supply voltage for valves

3 Connection block

- Choice of 8 connection technology variants
- Protection class IP65/IP67 or IP20
- Can be combined with the electronics modules
- M8/M12/Sub-D/quick connection
- M8/M12/Sub-D, etc. connecting cables
- Modular system for M8/M12 connecting cables
- M12 connection technology for the metal design

Pneumatics interface

- MPA-S
- MPA-F
- MPA-L
- VTSA/VTSA-F
- MIDI/MAXI
- CPA10/14

Individual overview of modules

Modules for actuating electric drive units

→ 132

CPX-CMXX

- Multi-axis interface
- Ethernet interface
- 2 axis groups with max. 4 axes per group
- Max. 1024 positioning records per axis group

CPX-CM-HPP

- Axis interface
- CAN bus for up to 4 individual electric axes

Modules for controlling pneumatic drive units

→ 139

CPX-CMAX

- Axis controller
- Position and force control
- 64 configurable positioning records
- Auto-identification
- Control of a brake or clamping unit via the proportional directional control valve VPWP

CPX-CMPX

- End-position controller
- Fast travel between the mechanical end stops of the cylinder
- Smooth travel into the end position
- Improved control of downtime
- Control of a brake via the proportional directional control valve VPWP

CPX-CMIX

- Measuring module
- CAN input (Festo specification) for measuring signal
- Recording of the absolute position values or speed values of the connected drive

Plastic connection block

Direct machine mounting
(protection class IP65/IP67)

- M8-3POL
- M8-4POL
- M12-5POL
- M12-5POL quick lock, metal thread screened
- M12-8POL
- Sub-D
- Quick connector
- Spring-loaded terminal with cover

Protected fitting space
(protection class IP20)

- Spring-loaded terminal

Screening concept

- Optional screening plate for connection blocks with M12 connection technology

Metal manifold block

Direct machine mounting
(protection class IP65/IP67)

- M12-5POL

Connection block including electronics module and interlinking block

Installation in the control cabinet
(protection class IP20)

- Plastic connection block
- Spring-loaded terminal
- Digital input module with 16 inputs
- Digital I/O module with 8 inputs and 8 outputs

Peripherals overview

FESTO

Individual overview of modules

Plastic interlinking block – Interlinking by means of tie rods

→ 203

System linking

- Different voltages for supplying the modules
- Serial communication between the modules

System supply

- M18 4-pin
- 7/8" 4-pin or 5-pin

In addition to system linking, power supply for the

- electronics plus sensors (16 A)
- valves plus actuators (16 A)

Additional power supply

In addition to system linking, power supply for the

- actuators (16 A per supply)

Power supply for the

- valves (16 A per supply)

Expandability

- Can be expanded using an interlinking block with tie-rod extension CPX-ZA-1-E

Metal interlinking block – Individual linking

→ 203

System linking

- Different voltages for supplying the modules
- Serial communication between the modules

System supply

- 7/8" 4-pin or 5-pin
- AIDA push-pull

In addition to system linking, power supply for the

- electronics plus sensors (16 A)
- valves plus actuators (16 A)

Additional power supply

In addition to system linking, power supply for the

- actuators (16 A per supply)

Power supply for the

- valves (16 A per supply)

Expandability

- Can be expanded as required by up to 10 interlinking blocks

- - Note

Plastic interlinking blocks (tie rods) and metal interlinking blocks (individual linking) cannot be combined due to their different interlinking systems.

- - Note

The 7/8" supply is subject to the following restriction due to the available accessories:

- 5-pin 8 A
- 4-pin 10 A

- - Note

The usage of appropriate interlinking blocks (CPX-...-VL) is required for use in ATEX environments as per approval certificate (→ 46). The maximum supply is limited to 8 A for these modules.

Individual overview of modules

Pneumatic interface MPA-S

→ 217

- Valve terminal
- MPA1 (360 l/min)
 - MPA2 (700 l/min)
 - Up to 128 solenoid coils
 - Up to 16 modules can be configured
 - For CPX plastic design
 - For CPX metal design

Pneumatic interface MPA-L

→ 219

- Valve terminal
- MPA1 (360 l/min)
 - MPA14 (670 l/min)
 - MPA2 (870 l/min)
 - Up to 32 solenoid coils
 - For CPX plastic design

Pneumatic interface MPA-F

→ 220

- Valve terminal
- MPAF1 (360 l/min)
 - MPAF2 (900 l/min)
 - Up to 128 solenoid coils
 - Up to 16 modules can be configured
 - With integrated pressure sensor for channel 1
 - For CPX plastic design
 - For CPX metal design

Pneumatic interface VTSA/VTSA-F

→ 222

- Valve terminal (valve flow rate according to width)
- 18 mm (700 l/min)
 - 26 mm (1,350 l/min)
 - 42 mm (1,300 l/min)
 - 52 mm (2,900 l/min)
 - 65 mm (4,000 l/min)
 - Max. 32 valve positions/
max. 32 solenoid coils
 - For CPX plastic design
 - For CPX metal design

Pneumatic interface MIDI/MAXI

→ 223

- Valve terminal
- MIDI valves (500 l/min)
and/or
MAXI valves (1250 l/min)
 - Up to 26 solenoid coils
 - Setting of the number of valves via
DIL switch
 - For CPX plastic design
 - For CPX metal design

Pneumatic interface CPA

→ 225

- Valve terminal
- CPA10 (300 l/min)
 - CPA14 (600 l/min)
 - Up to 22 solenoid coils
 - Setting of the number of valves via
DIL switch
 - For CPX plastic design

Terminal CPX

Peripherals overview

FESTO

Individual overview of modules

End plate for plastic/metal design

End plate

- Left-hand
- Right-hand (for using of the CPX terminal without valves)

End plate with system power supply

→ 199

End plate

- Left-hand
- For plastic design
- Different voltages for supplying the CPX terminal

End plate with extension

→ 201

End plate

- Left-hand
- Right-hand
- Enables the CPX terminal to be separated into two interconnected units (series)
- Simplifies control cabinet installation
- For plastic or metal design

Earthing plate (for end plate for plastic design)

Earthing plate

- For safe and easy connection to the machine bed or H-rail, suitable for right-hand and left-hand end plate
- Assembly and earthing in a single processing step, which means:
 - 50% time saving
 - No additional material required

Terminal CPX

Peripherals overview

FESTO

General basic data and guidelines

Max. 11 modules in total:

- One bus node and/or one control block, freely positionable
- Up to 9 additional input/output modules, freely positionable
- An additional pneumatic interface always positioned as the last module on the right-hand side
 - With VTSA, VTSA-F, MPA-F, CPA and MIDI/MAXI: fixed operating range, set using DIL switch
 - With MPA-S: 16 MPA modules can be configured
 - With MPA-L: fixed operating range, set using rotary switch

- Address capacity max. 512 inputs and 512 outputs, depending on bus node or control block
- One interlinking block with system supply
- Multiple interlinking blocks with additional power supply, always positioned to the right of the interlinking block with system supply
- The connection blocks can, with just a few exceptions, be freely combined with the electronics modules for inputs/outputs, either in metal or plastic (→ table below)
- The electronics modules for inputs/outputs can be combined with various interlinking blocks
- Plastic interlinking blocks (tie rods) and metal interlinking blocks (individual linking) cannot be combined due to their different interlinking systems

Hood

Description

→ 238

The CPX hood CAFC is a space- and cost-saving alternative to a control cabinet.

It is designed as an extruded aluminium profile and is installed on a mounting plate.

The valve terminal (CPX with MPA-S or MPA-L) is well protected and is quick to install without the need for complex control cabinet installation for cables and tubing.

The rail and the two mounting brackets are mounted on a base plate. The hood is attached to the retaining rail and secured with two screws. There is also a stand-by position (locking of the hood in the open position).

The hood is locked using two side screws (which meet the requirements for a special lock in compliance with ATEX).

The CPX hood can be ordered online using the valve terminal configurator.

Advantages of the CPX hood

- Impact protection (min. 7 J) for the underlying modules in combination with a suitable mounting plate provided by the user
- Protection against electrostatic discharge through the use of electrically conductive materials and the option of connecting an earth wire
- Protection against disconnection of live plug connectors (by securing the hood with at least one special lock to EN 600079-0, 9.2 and 20)
- UV protection for the underlying CPX and MPA modules

Points to note when using the CPX hood

- Only in combination with valve terminal MPA-S and MPA-L
- No bus nodes with push-pull connection (CPX-M-FB34, CPX-M-FB35)
- CPX power supply via angled plugs, no T-plugs, no push-pull
- Electrical supply plate/additional power supply only possible with angled plug
- No MPA vertical stacking
- Use of larger QS fittings (for tubing O.D. larger than 12 mm) only possible with the angled design
- Ducted exhaust air only with elbow connector
- The permissible ambient temperature of the valve terminal is reduced by 5 °C

Note

The CPX hood has no influence on the ATEX classification of the valve terminal or of the CPX terminal.

The CPX hood has no influence on the IP protection class of the valve terminal or of the CPX terminal.

The CPX hood does not protect against the effects of the weather in installations that are not in closed spaces.

Terminal CPX

Key features – Assembly

FESTO

Hood

Mounting

Procedure:

- Assemble the rail and mounting bracket included in the mounting kit
- Attach the earth cable
- Assemble the hood (if applicable, screw together several hood sections before attaching the side pieces)
- Attach and secure the hood

- 1 Side piece
- 2 Earth cable
- 3 Hood section
- 4 Slot nut with screws, for joining the hood sections
- 5 Rail
- 6 Mounting bracket

Technical data

Weight:

- Hood: approx. 500 g per 100 mm of length
- Mounting rail: approx. 550 g per 1000 mm of length
- Side pieces: approx. 500 g per side

- Ambient temperature $-5 \dots +50 \text{ }^{\circ}\text{C}$
- RoHS-compliant

Terminal CPX

Key features – Assembly

FESTO

Extension

Functional principle

The extension enables the CPX terminal to be separated into or configured as two interconnected units (series). The two parts are controlled by a common bus node or control block. An extensive CPX terminal can fit into limited installation spaces more easily in the form of two compact units.

Applications:

- Installation in a control cabinet on two levels, one beneath the other
- Installation in two separate control cabinets, or inside and outside a control cabinet
- Installation of part of the CPX terminal inside and part outside the control cabinet
- Spatial separation of electrics and pneumatics

Performance limits

- A maximum of 10 CPX modules are permitted on the first row
- A maximum of 8 CPX modules and a pneumatic interface are permitted in the second row
- The number of CPX modules and solenoid coils is additionally limited by:
 - the address space made available by the control block/bus node
 - their address requirement
 - their current consumption

Optimisation

- The maximum possible performance or maximum number of modules can only be achieved if the following conditions are observed:
- The control block/bus node is installed in the first row, on the far right, on an interlinking block with system supply
 - The connecting cable between the first and second row is max. 2 m long
 - An interlinking block with additional power supply for valves is situated in the second row

Configuration rules

- The extension limits the power supply for the sensors and electronics for the CPX terminal as a whole as follows:
- first row max. 6 A
 - second row max. 2 A
 - first and second row together, max. 6 A
- If the 3 m connecting cable is used, the following restrictions are in place:
- There can only be one CPX module in the second row
 - An additional power supply for valves is required in order to connect a valve terminal
- Positioning output modules in the second row requires a corresponding power supply in the second row:
- Install interlinking block with additional power supply for outputs in the second row to the left of the first output module

FESTO

Mounting options

Valve terminals with CPX terminal support different mounting options for direct machine mounting a high

degree of high protection and control cabinet installation.

H-rail mounting

The H-rail mounting is part of the reverse profile of the CPX interlinking blocks. The CPX terminal can be attached to the H-rail using the H-rail mounting kit.

The CPX terminal is mounted on the H-rail for this purpose (see arrow A).

It is then swivelled onto the H-rail and secured in place with the clamping component (see arrow B).

The optional earthing plate enables a connection to be established to the machine potential/earth in one easy step.

For H-rail mounting you will need the following mounting kit:

- CPX-CPA-BG-NRH

This facilitates mounting of the CPX terminal on H-rails to EN 60715.

An additional mounting kit is required for combination with valve terminals.

Wall mounting, plastic design

The end plates of the CPX terminal, the valve terminal and the pneumatic interface include mounting holes for wall mounting. Additional mountings for the CPX terminal are available for longer valve terminals. These mountings differ depending on the design of the CPX terminal (plastic or metal).

Wall mounting, metal design

Terminal CPX

Key features – Assembly

FESTO

Plastic design CPX terminal

Additional mountings

For longer valve terminals, there are additional mounting components for the CPX terminal that can be fitted between two modules.

Note

In the case of CPX terminals with 4 and more interlinking blocks, additional mountings of the type CPX-BG-RW must be used every 100 or 150 mm. These are supplied pre-assembled.

Interlinking with tie rods

The CPX modules are mechanically connected using special tie rods **2**. Two screws in the end plates are all that are needed to assemble the entire unit.

The tie rod ensures that the unit resists high mechanical loads and is therefore the mechanical backbone of the CPX terminal.

The open design enables interlinking blocks **1** to be replaced in the assembled state.

The tie rod expansion kit **3** enables an extra module to be added to the CPX terminal.

CPX terminal in metal design

Additional mountings

For longer valve terminals, there are additional mounting brackets for the CPX terminal that can be screwed onto the interlinking blocks.

The mounting bracket CPX-M-BG-VT-2X enables a CPX terminal with valve terminal VTSA/VTSA-F to be mounted on a support system.

Note

In the case of CPX terminals with 4 and more interlinking blocks, additional mounting brackets of the type CPX-M-BG-RW must be used every 100 or 150 mm. These are supplied pre-assembled.

Linking with screws

The CPX modules are mechanically connected using a special angled fitting.

The CPX terminal can thus be expanded at any time.

Terminal CPX

Key features – Power supply

FESTO

Power supply concept

General

The use of decentralised devices on the fieldbus – particularly with a high degree protection for direct machine mounting – demands a flexible power

supply concept. A valve terminal with CPX can, in principle, supply all voltages via a single socket. A distinction is made between the

supply for

- Electronics plus sensors
- Valves plus actuators

in this case.

Selectable connection technology:

- M18
- 7/8"
- AIDA push-pull

Interlinking blocks

Interlinking blocks represent the backbone of the CPX terminal with all supply lines. They provide the power supply for the modules used on them

as well as their bus connections. Many applications require the CPX terminal to be segmented into voltage zones. This applies in particular to the

separate disconnection of solenoid coils and outputs. The interlinking blocks provide either a space-saving central power supply

for the entire CPX terminal or galvanically isolated, all-pin disconnectable potential groups/ voltage segments.

Type for metal design

- CPX-M-GE-EV-Z-7/8-5POL
- CPX-M-GE-EV-Z-PP-5POL

Connection technology

- 7/8" 5-pin
- AIDA push-pull, 5-pin

With additional power supply for valves

Type for plastic design

- CPX-GE-EV-V
- CPX-GE-EV-V-7/8-4POL

Connection technology

- M18 4-pin
- 7/8" 4-pin

Power supply

- For valves that are connected to the CPX terminal via a pneumatic interface

Note

For 7/8":

- Commercially available accessories are often limited to max. 8 A

Note

Valve terminal MPA-S has either a 7/8" 5-pin, 7/8" 4-pin, 3-pin M18 or 5-pin AIDA push-pull power supply for one or more valve voltage zones. Galvanically isolated, all pins disconnectable with voltage monitoring in the following MPA module.

Note

Suitable versions of the interlinking blocks with M18 and 7/8", 5-pin connection are available (CPX-GE-EV-...-VL and CPX-M-GE-EV-...-VL) for use in ATEX environments as per certification (→ 46). The maximum current supply for these interlinking blocks is 8 A.

Terminal CPX

Key features – Diagnostics

FESTO

Diagnostics

System performance

- 1 Diagnostics via bus interface
- 2 Undervoltage monitoring
- 3 Diagnostic overview LED
 - Fieldbus status
 - CPX status
- 4 Status and diagnostic LED for module and I/O channels

- 5 Module and channel-specific diagnostics
- 6 Valve-specific diagnostics for module and solenoid coils

Detailed diagnostic functions are needed in order to quickly locate the causes of errors in the electrical installation and therefore reduce downtimes in production plants. A basic distinction is made between on-the-spot diagnostics using LEDs or an operator unit and diagnostics using a bus interface.

The CPX terminal supports on-the-spot diagnostics via a row of LEDs. This is separate from the connection area and therefore provides good visual access to status and diagnostic information.

Module and channel-specific diagnosis is supported, for example

- Undervoltage detection for outputs and valves
- Short circuit detection for sensors, outputs and valves
- Open-load detection for a missing solenoid coil
- Storage of the last 40 causes of errors with error start and error end

The diagnostic messages can be read out via the bus interface in the higher-order controller and visualised for the central recording and evaluation of error causes. This is done using the individual fieldbus-specific channels. The CPX-FEC and CPX-CEC also offer the option of access via the integrated Ethernet interface (remote maintenance via PC/web applications).

Overview of LEDs on the bus node

- 1 Fieldbus-specific LEDs

On each bus node, a maximum of 4 fieldbus-specific LEDs display the fieldbus communication status of the CPX terminal with the higher-order controller.

- 2 CPX-specific LEDs

A further 4 CPX-specific LEDs provide non-fieldbus-specific information about the status of the CPX terminal, for example

 - Power system
 - Power load
 - System fault
 - Modification parameters

Input/output module status and diagnostic LEDs

- 1 Status LEDs for the inputs and outputs

Each input and output channel is assigned a status LED.

- 2 Channel-oriented diagnostic LEDs

Depending on the module design, another diagnostic LED is available for each I/O channel

- 3 Group diagnostic LEDs

An LED displays the group diagnostics for each module

Terminal CPX

Key features – Parameterisation

FESTO

Diagnostics

Display on the operator unit

- 1 LCD graphical display for on-site plain-text diagnostics
- Fault location and type
 - Without programming

Display on a PC

- 1 CPX terminal with valve terminal
- 2 Adapter diagnostic interface to USB
- 3 Laptop/portable device with USB interface and installed FMT software
- Fault location and type
 - Without programming
 - Storing the configuration
 - Preparing screenshots

Parameterisation

Changes to the application are often required during commissioning. The parameterisable characteristics of the CPX modules mean that functions can be very easily changed by means of configuration software. This reduces

the number of modules needed and, consequently, the amount of storage space required.

It is therefore possible, for example, to reduce the switch-on debounce time for an input module – normally 3 ms –

to 0.1 ms on a "fast" input module for faster processes, or to set the response of a valve following a fieldbus interrupt.

Depending on the modules used, parameterisation can be performed

via the following interfaces:

- Ethernet
- Fieldbus
- Control block direct interface (programming interface)
- Operator unit CPX-MMI

- 1 Input debounce time 3 ms
- 2 Input debounce time 0.1 ms

Terminal CPX

Key features – Addressing

FESTO

Addressing

The various CPX modules occupy a different number of I/O addresses within the CPX system. The maximum address space for bus nodes depends on the performance of the fieldbus systems.

Maximum system configuration:

- 1 bus node or control block
- 9 I/O modules
- 1 pneumatic interface (e.g. pneumatic interface MPA-S with up to 16 MPA manifold blocks)

The maximum system configuration can be limited in individual cases by exceeding the address space.

Please refer to the detailed description of the configuration/addressing rules in the technical data for CPX bus nodes.

Overview – Address space for CPX bus node and control block

	Protocol	Max. total		Max. digital		Max. analogue	
		Inputs	Outputs	Inputs	Outputs	Inputs	Outputs
CPX-FEC	• TCP/IP • Easy IP • Modbus TCP • HTTP	512 bits	512 bits	512 DI	512 DO	32 AI	18 AO
CPX-CEC	• CoDeSys level 2 • TCP/IP • Easy IP • Modbus TCP	512 bits	512 bits	512 DI	512 DO	32 AI	18 AO
CPX-FB6	INTERBUS	96 bits	96 bits	96 DI	96 DO	6 AI	6 AO
CPX-FB11	DeviceNet	512 bits	512 bits	512 DI	512 DO	32 AI	18 AO
CPX-FB13	PROFIBUS	512 bits	512 bits	512 DI	512 DO	32 AI	18 AO
CPX-FB14	CANOpen	256 bits	256 bits	64 DI (+ 64 DI)	64 DO (+ 64 DO)	8 AI (+ 8 AI)	8 AO (+ 8 AO)
CPX-M-FB20	INTERBUS (LWL)	96 bits	96 bits	96 DI	96 DO	6 AI	6 AO
CPX-M-FB21	INTERBUS (LWL)	96 bits	96 bits	96 DI	96 DO	6 AI	6 AO
CPX-FB23-24	CC-Link	512 bits	512 bits	512 DI	512 DO	32 AI	18 AO
CPX-FB32	EtherNet/IP	512 bits	512 bits	512 DI	512 DO	32 AI	18 AO
CPX-FB33	PROFINET RT	512 bits	512 bits	512 DI	512 DO	32 AI	18 AO
CPX-M-FB34	PROFINET RT	512 bits	512 bits	512 DI	512 DO	32 AI	18 AO
CPX-M-FB35	PROFINET RT	512 bits	512 bits	512 DI	512 DO	32 AI	18 AO
CPX-FB36	EtherNet/IP	512 bits	512 bits	512 DI	512 DO	32 AI	18 AO
CPX-FB38	EtherCAT	512 bits	512 bits	512 DI	512 DO	32 AI	18 AO

The bandwidth of the bus nodes can be restricted by the choice of module and the maximum number of modules.

Example CPX-FB6 (INTERBUS)

	Digital inputs	Digital outputs	Notes
3x CPX-8DE	24	–	• The address space is occupied by 7 CPX I/O modules plus pneumatic interface • No additional modules can be configured
1x CPX-8DE-8DA	8	8	
2x CPX-2AE	64	–	
1x CPX-2AA	–	32	
3x VMPA1	–	24	
Allocated address space	96	96	

DI = Digital inputs (1 bit)

DO = Digital outputs (1 bit)

AO = Analogue outputs (16 bits)

AI = Analogue inputs (16 bits)

1) Dependent on the DIL switch setting on the module

Terminal CPX

Technical data

FESTO

-  - Module width
50 mm

-  - Note
The data given here apply to the CPX system. If components that conform to lower values are used in the system, the specification for the entire system is reduced to the values of those components used.

Example

Protection class IP65/IP67 applies only to the fully assembled system with fitted plugs or covers (which must also conform to IP65/67). If components with a lower protection class are used, the protection level of the entire

system is reduced to the protection class of the component with the lowest protection level, for example CageClamp connection block with IP20 protection or MPA pneumatics with IP65 protection.

General technical data			
Module No.		197330	
Max. no. of modules ¹⁾	Control block		1
	Bus node		1
	I/O modules/CP interface/CTEL interface/electrical interface CPX-CTEL-2/multi-axis interface		9
	Pneumatic interface		1
Max. address capacity	Inputs	[byte]	64
	Outputs	[byte]	64
Internal cycle time		[ms]	< 1
Configuration support		Fieldbus-specific	
LED displays	Bus node/control block		Up to 4 LEDs, bus-specific 4 LEDs, CPX-specific • PS = Power system • PL = Power load • SF = System fault • M = Modify parameter/forcing active
	I/O modules		Min. one group diagnostic LED Channel-oriented status and diagnostic LED, depending on module
	Pneumatic interface		One group diagnostic LED Valve status LED on valve
Diagnostics		• Channel and module-oriented diagnostics for inputs/outputs and valves • Detection of module undervoltage for the different voltage potential values • Storage of the last 40 errors with timestamp (asynchronous access)	

1) A maximum of 11 modules in total can be combined
(e.g. 1 control block + 9 I/O modules + 1 pneumatic interface, or 1 control block + 1 bus node + 8 I/O modules + 1 pneumatic interface)

User manuals – General information

Comprehensive user manuals are vital for the fast and reliable use of fieldbus components. The manuals provided by Festo contain step-by-step instructions for using CPX terminals:

1. Installation
2. Commissioning and parameterisation
3. Diagnostics

Application-oriented explanations are provided for integration of the CPX terminal in the programming and configuration software of the various controller manufacturers.

Use the order code to select the language you want.

The manual for the configuration you have ordered is supplied automatically.

The documents can be quickly and easily downloaded from the Festo website.

User manuals – GSD, EDS, etc.

Device description files and icons are used to explain the integration of the CPX terminal in the configuration software of the various controller manufacturers.

These can be downloaded quickly and easily from www.festo.com.

Terminal CPX

Technical data – Operator unit CPX-MMI-1

FESTO

-  - Width
81 mm

The operator unit is a small, convenient commissioning and service device for the CPX terminal. It provides data polling, configuration and diagnostic functions for CPX terminals. Its extremely flexible application range means that data can be read in or out at any location. IP65 compatibility makes it suitable for use in harsh industrial environments.

Application

Functions

- Advance commissioning through the monitoring/forcing of inputs and outputs without fieldbus master/PLC
- Test function for parameter settings, for example fail-safe of the outputs or switch-on delay of the inputs
- Plain-text diagnostics of module and channel-oriented errors
- Condition monitoring: preselection/loading of counters, activation of the channels to be monitored
- Display of the last 40 error occurrences with timestamp
- Identification of sporadic causes of errors through display of the diagnostic history
- Password protection

Connection

The operator unit is connected to the CPX bus nodes or control block, as appropriate, using a pre-assembled M12 cable.

The voltage for the operator unit is supplied by the CPX component

Communication

Once connected to the CPX terminal, the operator unit loads the available configuration for the I/O modules, valves, etc.

This ensures the availability of up-to-date texts, messages, menus and displays. Status information, diagnostic messages and parameter bits are then exchanged during operation.

Assembly

A mounting bracket for the operator unit offers the option of wall or H-rail mounting.

The mounting bracket also has an option for temporary mounting using a hanging device.

Terminal CPX

Technical data – Operator unit CPX-MMI-1

FESTO

Connection

The operator unit is connected to the CPX terminal using pre-assembled cables.

Function examples

System overview

- Overview of configured modules and current diagnostic messages

Diagnostics

- Fast access to the diagnostic history and the modules with diagnostic messaging
- Display of the last 40 diagnostic messages with timestamp
- Display of the current diagnostic message for a module

Commissioning

- Selection of module-specific data and parameters
- Display and modification of the current status of the inputs and outputs of a module
- Display and modification of the current settings for module-specific parameters

Setup

- Setting of access permission (password)
- Contrast setting of the display

ATEX category	Gas	II 3 G
	Dust	II 3 D
EX-ignition protection type	Gas	Ex nA IIC T6 X Gc
	Dust	Ex tc IIIC T60°C X Dc IP65
ATEX ambient temperature	[°C]	–5 ≤ Ta ≤ +50

- 1) For information about the applicability of the component see the manufacturer's EC declaration of conformity at: www.festo.com/sp → User documentation.
If the component is subject to restrictions on usage in residential, office or commercial environments or small businesses, further measures to reduce the emitted interference may be necessary.

 **Note**

When operating device combinations in hazardous areas, the lowest common zone, temperature class and ambient temperature of the individual devices determine the possible use of the entire module.

Terminal CPX

Technical data – CPX Maintenance Tool

FESTO

Function

CPX Maintenance Tool (CPX-FMT) combines service software with a connecting adapter. The service software is a tool for the design, parameterisation and online diagnostics of the CPX terminal. The USB-to-M12 adapter features built-in galvanic isolation (between CPX and PC) and enables a PC to be connected to the diagnostic interface of the CPX terminal.

- Adapter
- Software on CD-ROM

Application

Only from Festo

The CPX-FMT software enables access to CPX valve terminals via Ethernet with the control block CPX-FEC and the bus nodes EtherNet/IP (FB 32) and PROFINET (FB 33, FB 34, FB 35). The bus nodes or control block can be connected directly to the PC via a USB adapter from Festo. Similar to the CPX-MMI, diagnostic data such as

the error trace or module diagnostics can be read out and parameters can be modified in plain text. In contrast to the CPX-MMI, the data can be used directly on a PC. There is an option, for example, to send screenshots of a configuration or the current error trace directly via e-mail. In addition, CPX configurations can also be saved

and archived directly as a CPX-FMT project. Undocumented changes can subsequently be identified using the online/offline comparison function. On-site tests such as the actuation of valves or the emulation of sensor feedback (in both cases called “forcing”), for example, can be

performed without an existing controller infrastructure. It must be noted that with both the CPX-FMT and the CPX-MMI, only local parameters on the CPX valve terminal can be changed and saved. The configuration of the networks or controller software cannot be influenced.

General technical data		
Type	NEFC-M12G5-0.3-U1G5	
System requirements	PC	IBM-compatible
	Drive	CD-ROM
	Interfaces	USB port (specification USB 1.1 or higher)
	Operating system	Microsoft Windows 2000 or XP
Functional range	• Configuration and parameterisation • Reading out of system, module, channel diagnostics and error trace • Saving of the configuration as a project • Integration of plug-ins/links to self-executing programs	
Scope of delivery	• Adapter M12, 5-pin to mini USB socket • CD-ROM with installation program	
Type of mounting	Screw-in	
Electrical connection	Plug M12x1, 5-pin	
Adapter cable composition	4 x 0.34 mm ²

Terminal CPX

Technical data – Control block CPX-FEC

FESTO

IT services:

Powerful control block for pre-processing actuation of the CPX modules.

The power supply to and communication with other modules takes place via the interlinking block.

In addition to the connection for the Ethernet interface in RJ45 and a programming interface in Sub-D, LEDs are also provided for the bus status, operating status of the PLC and CPX peripherals information, as are switching elements and a diagnostic interface for CPX-MMI and CPX-FMT.

Application

Bus connection

The CPX-FEC is a remote controller that can be connected to a master PLC via the bus nodes of the CPX terminal or via Ethernet. At the same time, it is

possible to operate the CPX-FEC as a compact stand-alone controller directly on the machine.

Modbus/TCP (code T05)

Transmits data in binary format within TCP/IP packets. This ensures good data throughput.

Operating modes

- Stand-alone/EasyIP
- Fieldbus remote controller
- Modbus/TCP remote controller
- Remote I/O Modbus/TCP

Communication protocols

- | | | |
|---|--|---|
| <ul style="list-style-type: none"> • PROFIBUS, PROFINET, DeviceNet, INTERBUS, CANopen, EtherCAT and CC-Link via CPX bus node • Modbus/TCP • EasyIP | <ul style="list-style-type: none"> • IP • TCP • UDP • SMTP | <ul style="list-style-type: none"> • HTTP • DHCP • BootP • TFTP |
|---|--|---|

Setting options

CPX-FEC has the following interfaces for monitoring, programming and commissioning:

- For the CPX-MMI/-FMT
- Serial interface RS232, for example, for a Front End Display (FED)
- Ethernet interface for IT applications
- Remote diagnostics

The operating mode and fieldbus protocol are set using the DIL switch on the CPX-FEC.

The integrated web server offers a convenient means of querying data saved in the CPX-FEC.

Technical data

FESTO

The CoDeSys controller is a modern control system for CPX terminals that enables programming with CoDeSys to IEC 61131-3.

- Easy actuation of valve terminal configurations with MPA, VTSA
- Connection to all fieldbuses as a remote controller and for preprocessing
- Actuation of electric drives as individual axes via CANopen (CPX-CEC-C1/-M1)

- Diagnostics with flexible monitoring options for pressure, flow rate, cylinder operating time, air consumption
- Early warnings and visualisation options
- Actuation of decentralised installation systems on the basis of CPI actuation of applications in proportional pneumatics
- Servopneumatic applications
- AS-interface actuation via gateway

Terminal CPX

Technical data – Bus node CPX-FB6

FESTO

Bus node for handling communication between the electrical CPX terminal and a higher-order master via INTERBUS.

The bus node is provided with system supply via the interlinking block and processes communication with the I/O modules.

The status of the CPX terminal is displayed as a common message via four CPX-specific LEDs.

The fieldbus communication status is displayed via four INTERBUS-specific LEDs.

Application

Bus connection

The bus connection is established via a 9-pin Sub-D socket and a 9-pin Sub-D plug with a typical INTERBUS pin allocation.

The bus connector plugs (with IP65/IP67 protection from Festo or IP20 protection from other manufacturers) facilitate the connection of the incoming and outgoing bus cable.

The outgoing bus plug contains the typical INTERBUS RBST bridge for identification of the outgoing bus connection.

The Sub-D interfaces are designed for controlling network components with a fibre-optic cable connection.

INTERBUS implementation

The CPX-FB6 supports the INTERBUS protocol to EN 50254.

In addition to synchronous I/O exchange, the optional PCP channel can be used for parameterisation and diagnostic functions.

The PCP channel provides access to advanced system information and assigns operation parameters while the controller is running via the user program.

An example of this is access to the integrated diagnostic memory function, i.e. storage of the last 40 errors with timestamp, module, channel and error type.

With its address capacity of 96 inputs and 96 outputs, the CPX-FB6 supports a large number of I/O module configurations, including pneumatic interface.

Note

If the PCP channel is used, the maximum number of possible process data bits is reduced by 16.

Special points in combination with CPX-FEC/CPX-CEC

When a bus node is combined with a control block (CPX-FEX, CPX-CEC, in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are controlled via the CPX control block.

In this case, the bus node only provides the communication interface to the PLC. Communication between the control block and CPX bus node is established

via the interlinking of the CPX modules and occupies an address capacity of the CPX system of:

- 8 byte outputs
- 8 byte inputs

The remaining address capacity of the control block or CPX system for actuating the peripherals is:

- 56 byte inputs
- 56 byte outputs

	8	n.c.	Not connected		
	9	RBST	Station detection ¹⁾		
	Hous-ing	Screened	Connection to FE (functional earth)	Hous-ing	

The incoming interface is galvanically isolated from the CPX peripherals. The plug housing is connected to the functional earth FE of the CPX terminal via an R/C combination.

1) The CPX terminal contains the protocol chip SUP1 3 OPC. This ensures automatic detection of additional connected INTERBUS stations. There is therefore no need for a bridge between pin 5 and pin 9.

Terminal CPX

Technical data – Bus node CPX-FB11

FESTO

Bus node for handling communication between the electrical CPX terminal and a DeviceNet network.

The bus node is provided with system supply via the interlinking block and processes communication with the I/O modules.

The status of the CPX terminal is displayed as a common message via four CPX-specific LEDs.

The fieldbus communication status is displayed via the three DeviceNet-specific LEDs.

Application

Bus connection

The bus connection can be selected when ordering, either Micro Style as 2xM12 round connectors or OpenStyle as a terminal strip with IP20 protection.

Both connection types have the function of an integrated T-distributor with incoming and outgoing bus line.

DeviceNet implementation

The CPX-FB11 operates with the “Predefined Master/Slave Connection Set” as a “Group 2 Only Server”. The polled I/O, change of state or synchronous method is used for the transmission of synchronous I/O data. The type of transmission can be selected in the network configuration.

The device diagnostics for all bus nodes CPX-FB11 is effectively gathered via strobed I/O and displayed in the input table of the controller. In addition to synchronous data transmission, asynchronous communication is supported through explicit messaging, which enables detailed device diagnostics and parameterisation.

A comprehensive EDS file supports the display of asynchronous data. It is also possible to display system information and assign parameters while the controller is running via the user program or the configuration software.

An example of this is access to the integrated diagnostic memory function, i.e. storage of the last 40 errors with timestamp, module, channel and error type. With its address capacity of 64 byte inputs and 64 byte outputs, the CPX-FB11 supports any configuration of I/O modules, including pneumatic interface.

Special points in combination with CPX-FEC/CPX-CEC

When a bus node is combined with a control block (CPX-FEX, CPX-CEC, in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are controlled via the CPX control block.

In this case, the bus node only provides the communication interface to the PLC. Communication between the control block and CPX bus node is established

via the interlinking of the CPX modules and occupies an address capacity of the CPX system of:

- 8 byte outputs
- 8 byte inputs

The remaining address capacity of the control block or CPX system for actuating the peripherals is:

- 56 byte inputs
- 56 byte outputs

Terminal CPX

Technical data – Bus node CPX-FB13

FESTO

Bus node for handling communication between the electrical CPX terminal and a higher-order master via PROFIBUS DP.

The bus node is provided with system supply via the interlinking block and processes communication with the I/O modules.

The status of the CPX terminal is displayed as a common message via four CPX-specific LEDs.

The fieldbus communication status is displayed via the PROFIBUS-specific error LED.

Application

Bus connection

The bus connection is established via a 9-pin Sub-D socket with a typical PROFIBUS allocation (to EN 50170).

The bus connector plug (with IP65/IP67 protection from Festo or IP20 protection from other manufacturers) facilitates the connection of an incoming and an outgoing bus cable.

An active bus terminal can be connected using the DIL switch integrated in the plug.

The Sub-D interface is designed for controlling network components with a fibre-optic cable connection.

PROFIBUS DP implementation

The CPX-FB13 supports the PROFIBUS DP protocol to EN 50170 Volume 2 for synchronous I/O exchange, parametrisation and diagnostic functions (DPV0).

In addition to DPV0, asynchronous communication to the advanced specification DPV1 is supported. DPV1 provides asynchronous access to advanced system information and assigns operation parameters while the controller is running via the user program.

An example of this is access to the integrated diagnostic memory function, i.e. storage of the last 40 errors with timestamp, module, channel and error type.

With its address capacity of 64 byte inputs and 64 byte outputs, the CPX-FB13 supports any configuration of I/O modules, including pneumatic interface.

Special points in combination with CPX-FEC/CPX-CEC

When a bus node is combined with a control block (CPX-FEX, CPX-CEC, in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are controlled via the CPX control block.

In this case, the bus node only provides the communication interface to the PLC. Communication between the control block and CPX bus node is established

via the interlinking of the CPX modules and occupies an address capacity of the CPX system of:

- 8 byte outputs
- 8 byte inputs

The remaining address capacity of the control block or CPX system for actuating the peripherals is:

- 56 byte inputs
- 56 byte outputs

Terminal CPX

Technical data – Bus node CPX-FB14

FESTO

Bus node for handling communication between the electrical CPX terminal and a CANopen network master or CANopen network. The bus node is provided with system supply via the interlinking block and processes communication with the I/O modules. The status of the CPX terminal is displayed as a common message via four CPX-specific LEDs. The different CANopen statuses and the fieldbus communication status are displayed via three additional LEDs.

Application			
Bus connection			
The bus connection is established via a 9-pin Sub-D plug (pin) as per the CAN in Automation (CiA) specification DS 102 with additional 24 V CAN transceiver supply (option as per DS 102).	The bus connector plug (with IP65/IP67 protection from Festo or IP20 protection from other manufacturers) facilitates the connection of an incoming and an outgoing bus cable.	There are four contacts available for the four wires (CAN_L, CAN_H, 24 V, 0 V) of the incoming and outgoing bus cables.	
CANopen implementation			
The CPX-FB14 supports the CANopen protocol in accordance with the specifications DS 301 V4.01 and DS 401 V2.0. Implementation is based on the CiA Pre-defined Connection Set. There are four PDOs available for fast I/O data exchange.	Advanced system information can also be accessed by means of SDO communication. SDO communication also facilitates parameterisation before network startup or while the controller is running via the user program. An example of this is access to the integrated diagnostic memory function, i.e. storage of the last 40 errors with timestamp, module, channel and error type.	With its address capacity, the CPX-FB14 supports a large number of I/O module configurations, including pneumatic interface. By default, 8 byte digital inputs and 8 byte digital outputs can be addressed via PDO 1.	8 analogue input channels and 8 analogue output channels can be addressed via PDO 2 and 3. Status and diagnostic information can be evaluated via PDO 4. Additional 8 byte digital inputs and outputs as well as 8 analogue input and output channels can be addressed via mapping.
Special points in combination with CPX-FEC/CPX-CEC			
When a bus node is combined with a control block (CPX-FEX, CPX-CEC, in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are controlled via the CPX control block.	In this case, the bus node only provides the communication interface to the PLC. Communication between the control block and CPX bus node is established	via the interlinking of the CPX modules and occupies an address capacity of the CPX system of: • 8 byte outputs • 8 byte inputs	The remaining address capacity of the control block or CPX system for actuating the peripherals is: • 56 byte inputs • 56 byte outputs

Terminal CPX

Technical data – Bus node CPX-M-FB20/CPX-M-FB21

FESTO

Bus node for handling communication between the electrical terminal CPX and a higher-order master via INTERBUS.
The bus node processes communication with the I/O modules.
The status of the terminal CPX is displayed as a common message via 4 CPX-specific LEDs.
The fieldbus communication status is displayed via 6 INTERBUS-specific LEDs.

Application

Bus connection

The bus connection is established via a socket with INTERBUS Rugged Line connection technology and the associated plug, with fibre-optic cables used for the power supply to the valve terminal and data transmission.

The fieldbus node is used as a remote I/O. It supports processing of max. 96 inputs and 96 outputs or max. 6 analogue I/O channels.

The I/O area is divided into:

- Digital I/O
- Analogue I/O

- System status/system diagnostics (optional)
- PCP channel (optional)

INTERBUS implementation

The CPX-M-FB20 and CPX-M-FB21 support the INTERBUS protocol to EN 50254.

In addition to cyclic I/O exchange, the optional PCP channel can be used for parameterisation and diagnostic functions.

An example of this is access to the integrated diagnostic memory function, i.e. storage of the last 40 errors with timestamp, module, channel and error type.

The PCP channel provides access to advanced system information and assigns operation parameters while the controller is running via the user program.

Note

If the PCP channel is used, the maximum number of possible process data bits is reduced by 16.

Special features in combination with CPX-FB20/CPX-FB21

- Remote Controller operating mode is not supported.
A CPX-FEC/CPX-CEC cannot be used in combination with CPX-FB20/CPX-FB21 in a terminal CPX.

- Power is supplied via the fieldbus connection. It is therefore not possible to use an interlinking block with system supply within a terminal CPX with CPX-M-FB20/CPX-M-FB21.

- Only the valve terminals VTSA and VTSA-F with pneumatic interface VABA-S6-1-X2 can be selected as the pneumatic part.

CC-Link

Bus node for handling communication between the electrical CPX terminal and a higher-order master for Control & Communication-Link (CC-Link) from Mitsubishi.

The bus node is provided with system supply via the interlinking block and processes communication with the I/O modules.

The status of the CPX terminal is displayed as a common message via 4 CPX-specific LEDs.

The fieldbus communication status is displayed via 4 CC-Link-specific LEDs.

Application

Bus connection

The bus connection can be selected when ordering and is established by means of a screw terminal with IP20

protection, a Sub-D plug with IP65/IP67 protection from Festo or IP20 protection from other

manufacturers. Both connection types have the function of an integrated T-distributor and

thus support the connection of an incoming and outgoing bus cable.

CC-Link implementation

The CPX bus node CPX-FB23-24 optionally supports the CC-Link versions 2.0 (as function module F24) and 1.1 (as function module F23). These designations are also found in the system diagram for the CPX Maintenance Tool (CPX-FMT) or in the operator unit (CPX-MMI-1) from Festo.

Function module F24 corresponds to CC-Link version 2.0 and supports a maximum of four stations per slave, up to an address capacity 64 bytes of digital I/O and 64 bytes of analogue I/O each. It is possible to optimise the configuration of the addressing in terms of either cycle time or station.

Function module F23 corresponds to CC-Link version 1.1 and supports a maximum of four stations per slave, up to an address capacity 32 bytes of digital I/O and 14 bytes of analogue I/O each.

The function module and option are set using the DIL switch on the CPX bus nodes.

Points to note in connection with CPX-FEC/CPX-CEC

When a bus node is combined with a control block (CPX-FEC, CPX-CEC, in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are controlled via the CPX control block.

In this case, the bus node only provides the communication interface to the PLC. Communication between the control block and CPX bus node takes place by interlinking of the CPX modules and

takes up the following address capacity in the CPX system:

- 8 byte outputs
 - 8 byte inputs
- The following address capacity

remains in the control block or CPX system for actuation of the peripherals:

- 56 byte inputs
- 56 byte outputs

Terminal CPX

Technical data – Bus node CPX-FB32

FESTO

Bus node for handling communication between the electrical CPX terminal and the EtherNet/IP network.

The bus node is provided with system supply via the interlinking block and processes communication with the I/O modules.

The status of the CPX terminal is displayed as a common message via four CPX-specific LEDs.

Application

Bus connection

The bus connection is established via an M12 plug, D-coded to IEC947-5-2 with IP65/67 protection.

EtherNet/IP is an open bus system based on the Ethernet standard and TCP/IP technology (IEEE802.3).

EtherNet/IP implementation

The CPX-FB32 supports the two remote I/O and remote controller operating modes. In remote I/O operating mode, all functions of the CPX valve terminal are

directly controlled by the EtherNet/IP master (host). In addition to actuation via a bus system, it is possible to use IT technol-

ogies. An integrated web server enables diagnostic data to be visualised via HTML. Various programs support direct access to the data of the device

from the automation network. The EtherNet/IP node for CPX supports the transmission technology that conforms to DIN EN 50173/CAT 5.

Special points in combination with CPX-FEC/CPX-CEC

When a bus node is combined with a control block (CPX-FEX, CPX-CEC, in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are controlled via the CPX control block.

In this case, the bus node only provides the communication interface to the PLC. Communication between the control block and CPX bus node is established

via the interlinking of the CPX modules and occupies an address capacity of the CPX system of:

- 8 byte outputs
- 8 byte inputs

The remaining address capacity of the control block or CPX system for actuating the peripherals is:

- 56 byte inputs
- 56 byte outputs

Terminal CPX

Technical data – Bus node CPX-FB33

FESTO

Bus node for operating the CPX valve terminal on PROFINET.
The bus node is provided with system supply via the interlinking block and processes communication with the I/O modules.
The status of the CPX terminal is displayed as a common message via four CPX-specific LEDs.
The fieldbus communication status is displayed via three bus-specific LEDs.

Application

Bus connection

The bus connection is established via two M12 sockets, D-coded to IEC61076-2-101 with IP65/67 protection.

Both connections are equivalent 100BaseTX Ethernet ports with integrated auto MDI functionality

(cross-over and patch cables can be used) that are brought together via an internal switch.

- Maximum segment length 100 m
- Transmission rate 100 Mbit/s

PROFINET implementation

The CPX-FB33 supports the PROFINET protocol on the basis of the Ethernet standard and TCP/IP technology to IEEE802.3.
This guarantees a data exchange with a high data transmission rate, for example I/O data from sensors, actuators or robot controllers, PLCs

or process equipment. In addition, non-real-time critical information such as diagnostic information, configuration information, etc. can be transferred. The Ethernet bandwidth is sufficient to transfer both data types (real-time and non-real-time) in parallel.

The bus node features LEDs for bus status and CPX peripheral information as well as switch elements, memory stick and a diagnostic interface.
The purpose of the memory stick is to guarantee fast replacement of the bus node in the event of an error. PROFINET provides the user with

access to all peripherals, diagnostic data and parameter data of the CPX valve terminal. The bus node can be used as a remote I/O or remote controller. All information relevant to the CPX can be read out and, depending on the function, changed via an MMI.

Special points in combination with CPX-FEC/CPX-CEC

When a bus node is combined with a control block (CPX-FEX, CPX-CEC, in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are controlled via the CPX control block.

In this case, the bus node only provides the communication interface to the PLC.
Communication between the control block and CPX bus node is established

via the interlinking of the CPX modules and occupies an address capacity of the CPX system of:

- 8 byte outputs
- 8 byte inputs

The remaining address capacity of the control block or CPX system for actuating the peripherals is:

- 56 byte inputs
- 56 byte outputs

FESTO

Bus node for operating the CPX valve terminal on PROFINET IO. The bus node is provided with system supply via the interlinking block and processes communication with the I/O modules. The status of the CPX terminal is displayed as a common message via four CPX-specific LEDs. The fieldbus communication status is displayed via three bus-specific LEDs.

Application			
Bus connection			
The bus connection is established via two RJ45 push-pull sockets to IEC61076-3-106 and IEC60603 with IP65/67 protection.	Both connections are equivalent 100BaseTX Ethernet ports with integrated auto MDI functionality	(cross-over and patch cables can be used) that are brought together via an internal switch.	• Maximum segment length 100 m • Transmission rate 100 Mbit/s
PROFINET implementation			
The CPX-M-FB34 supports the PROFINET IO protocol based on the Ethernet standard and the TCP/IP technology to IEEE802.3. This guarantees a data exchange with a high data transmission rate, for example I/O data from sensors, actuators or robot controllers, PLCs	or process equipment. In addition, non-real-time critical information such as diagnostic information, configuration information, etc. can be transferred. The Ethernet bandwidth is sufficient to transmit both data types (real-time and non-real-time) in parallel.	The bus node features LEDs for bus status and CPX peripheral information as well as switch elements, memory stick and a diagnostic interface. The purpose of the memory stick is to guarantee fast replacement of the bus node in the event of an error. PROFINET provides the user with	access to all peripherals, diagnostic data and parameter data of the CPX valve terminal. The bus node can be used as a remote I/O or remote controller. All information relevant to the CPX can be read out and, depending on the function, changed via an MMI.
Special points in combination with CPX-FEC/CPX-CEC			
When a bus node is combined with a control block (CPX-FEX, CPX-CEC, in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are controlled via the CPX control block.	In this case, the bus node only provides the communication interface to the PLC. Communication between the control block and CPX bus node is established	via the interlinking of the CPX modules and occupies an address capacity of the CPX system of: • 8/16 byte outputs • 8/16 byte inputs	The remaining address capacity of the control block or CPX system for actuating the peripherals is: • 56/48 byte inputs • 56/48 byte outputs

Terminal CPX

Technical data – Bus node CPX-M-FB35

FESTO

Bus node for operating the CPX valve terminal on PROFINET IO.
The bus node is provided with system supply via the interlinking block and processes communication with the I/O modules.
The status of the CPX terminal is displayed as a common message via four CPX-specific LEDs.
The fieldbus communication status is displayed via three bus-specific LEDs.

Application

Bus connection

The bus connection is established via two SCRJ push-pull sockets to IEC61754-24 (fibre-optic cable, AIDA standard) to IP65/67.

Both connections are equivalent 100BaseFX Ethernet ports that are brought together via an internal switch.

Fibre-optic cables made from plastic (POF, 980/1000 µm) are suitable for use as the transmission medium.

- Maximum segment length 50 m
- Baud rate 100 Mbit/s
- Supports LLDP and SNMP

PROFINET implementation

The CPX-M-FB35 supports the PROFINET IO protocol based on the Ethernet standard and the TCP/IP technology to IEEE802.3.
This guarantees data exchange with a high data transmission rate, for example I/O data from sensors, actuators or robot controllers, PLCs or

process equipment. Furthermore, non real-time critical information such as diagnostic information, configuration information, etc. can be transferred. The Ethernet bandwidth is sufficient to transmit both data types (real-time and non real-time) in parallel.

The bus node features LEDs for bus status and CPX peripheral information as well as switch elements, memory stick and a diagnostic interface. The purpose of the memory stick is to guarantee fast replacement of the bus node in the event of an error. PROFINET provides the user with

access to all peripherals, diagnostic data and parameter data of the CPX valve terminal. The bus node can be used as a remote I/O or remote controller. All information relevant to the CPX can be read out and, depending on the function, changed via an MMI.

Points to note in connection with CPX-FEC/CPX-CEC

When combining a fieldbus node with a control block (CPX-FEC, CPX-CEC, in bus remote controller operating mode), the connected I/Os or valves, sensors and actuators are controlled via the CPX control block.

In this case, the bus node only provides the communication interface to the PLC. Communication between the control block and CPX bus node takes place

via interlinking of the CPX modules and takes up the following address capacity in the CPX system:

- 8/16 byte outputs
- 8/16 byte inputs

The following address capacity remains in the control block or CPX system for actuation of the peripherals:

- 56/48 byte inputs
- 56/48 byte outputs

Terminal CPX

Technical data – Bus node CPX-FB36

FESTO

Bus node for handling communication between the electrical terminal CPX and the EtherNet/IP network.

The bus node is provided with system supply via the interlinking block and processes communication with the I/O modules.

The status of the terminal CPX is displayed as a common message via 4 CPX-specific LEDs.

Application

Bus connection

The bus connection is established via an M12 plug, D-coded to IEC947-5-2 with IP65/67 protection.

EtherNet/IP is an open bus system based on the Ethernet standard and TCP/IP technology (IEEE802.3).

EtherNet/IP implementation

The CPX-FB36 supports the two operating modes: remote I/O and remote controller.
In remote I/O operating mode, all functions of the CPX valve terminal are

directly controlled by the EtherNet/IP master (host).
In addition to actuation via a bus system, it is possible to use IT technologies. An integrated web server

enables diagnostic data to be visualised via HTML. Various programs support direct access to the data of the device from the automation

network.
The EtherNet/IP node for CPX supports the transmission technology that conforms to DIN EN 50173/CAT 5.

Points to note in connection with CPX-FEC/CPX-CEC

When combining a bus node with a control block (CPX-FEC, CPX-CEC, in fieldbus remote controller operating mode), the connected I/Os or valves, sensors and actuators are controlled via the CPX control block.

In this case, the bus node only provides the communication interface to the PLC.
Communication between the control block and CPX bus node takes place via interlinking of the CPX modules

and takes up the following address capacity in the CPX system:
• 8 byte outputs
• 8 byte inputs
The following address capacity

remains in the control block or CPX system for actuation of the peripherals:
• 56 byte inputs
• 56 byte outputs

Terminal CPX

Technical data – CPX-CP interface

FESTO

The CPX-CP electrical interface establishes the connection to CP modules of the CPI installation system via prefabricated cables. The I/O data of the connected valve terminals with CP string extension and CP input and output modules are transferred to the connected CPX bus node and thus via fieldbus to the higher-order controller. This enables modular centralised and compact decentralised concepts to be established with one system. The CP electrical interface is supported by all CPX bus nodes and the CPX-FEC.

Application

CP connection

As well as transmitting the communication data, the max. four CP strings of a CPX-CP interface also transmit the supply voltage to the connected sensors and the load supply to the valves (or outputs). Both circuits are

supplied separately with 24 V, but with a common reference potential. The valve terminals with CP string extension (or outputs) are supplied with voltage for the electronics and valves by the interlinking block.

The following combinations are made possible by the CP interface:

- Centralised analogue and digital inputs and outputs of the CPX terminal

- Decentralised digital inputs and outputs of the CP installation system
- Valve/valve terminals that can be connected both centrally and decentrally

Configuration example – CP interface with CP modules

Terminal CPX

Technical data – CPX-CP interface

FESTO

Implementation

The CPX-CP interface supports the CPI system:

- Max. 4 individual electronically protected CP strings
- Max. 4 CP modules per string
- Max. 32 inputs/32 outputs per string
- The maximum length of a string is 10 m. If the CP interface is positioned centrally, the CP system can cover an area of 20 m in diameter
- Modules with CPI functionality

The following CP module variants are available:

- Input modules with 8 or 16 digital inputs (connection technology M8, M12 and CageClamp)
- Output modules with 4 or 8 digital outputs (connection technology M12)
- Valve terminals with CP string extension (up to 32 solenoid coils, different valve functions)

CPI modules support the following functions:

- Module-oriented diagnostics
- Module/channel-oriented parameterisation
- Support for all functions by the CPX-MMI or CPX-FMT operator unit
- Module can be positioned anywhere within the string

Several CP interface modules can be combined in one CPX terminal, depending on the address capacity of the bus node.

Example:

- CPX-FB13 (512 I/O)
- Max. 4 CP interface modules (128 I/O each) possible

Note

When arranging the CP modules it should be taken into consideration that CP input modules without CPI functionality should always be placed at the end of a string.

Configuration

The following rules apply for a string of a CPX-CP interface:

- Max. one output module or one valve terminal without CPI functionality
- Max. one output module without CPI functionality or one valve terminal with CP string extension
- Any number of CP modules with CPI functionality, up to the maximum limit of 4 modules and/or 32 inputs/32 outputs per string

Maximum extension:

- 4 input modules and 4 valve terminals/output modules without CPI functionality
- 16 CP modules with CPI functionality

The configuration of the strings with respect to the module type and position of the modules in the string is entered by activating the SAVE key in the CPX-CP interface and saved there permanently.

Saved data are retained even when the CP interface is isolated from the voltage supply.

The representation of the CP interface within a CPX terminal and thus at the fieldbus is dependent on the characteristics of the relevant fieldbus system. In addition to input and output addressing, this also applies to the representation of the diagnostics and parameterisation of the CP module and the characteristics of the CPI system.

Note

The remanent saving of configuration data means that changes in the configuration or faulty modules are still displayed even after a voltage failure.

Power supply

The module combines the 0 V potential of the power supply for electronics and sensors with the 0 V potential of the power supply for valves.
If all poles of the valves of a pneumatic interface connected to the right of the CP interface are to be switched off, an appropriate interlinking block with additional power supply must be used to the right of the CP interface.

Terminal CPX

Technical data – Interface CPX-CTEL

FESTO

The electrical interface CPX-CTEL master establishes the connection to modules with I-Port interface (device) from the CTEL/CTEU series. The I/O data from the connected devices is transferred to the connected CPX bus node and therefore transferred to the higher-level controller via fieldbus. A maximum of 4 devices can be connected to a CPX-CTEL master via appropriate M12- interfaces.

Application

I-Port interface

As well as transmitting the communication data, the I-Port interfaces of a CPX-CTEL master also transmit the power supply for the

connected sensors and the load supply for the valves (or outputs). Both circuits are supplied separately

with 24 V, with a separate reference potential. The connecting cables used must meet

the increased requirements resulting from their double function as a signal line and power supply cable.

Sample configuration – CPX-CTEL master with CTEL modules

The CPX-CTEL master provides four I-Port interfaces to which one device each can be connected. I-Port is an interface for exchanging serial data for connecting decentralised modules or valve terminals from Festo. The I-Port interface is based on IO-Link and is compatible with it in certain areas.

The connection type corresponds to a star topology. In other words, only one module or valve terminal can be connected to each I-Port.

The restrictions compared to IO-Link include:

- Permanently set baud rate of 230.4 kbit/s
- SIO mode is not supported
- Max. 32 bytes of input data and 32 bytes of output data
- Only one dump of the master commands is used
- Configuration via IODD is not supported

Terminal CPX

Technical data – Interface CPX-CTEL

FESTO

Implementation			
The CPX-CTEL master from Festo enables modules with an I-Port interface to be connected to a CPX system: • Max. 4 devices with individual electronic fuse protection • Max. 64 inputs/64 outputs per I-Port interface • The maximum length of a string is 20 m	The following device variants are available: • Input modules with 16 digital inputs (3-pin M8 and 5-pin M12 connection technology) • Valve terminals with I-Port interface (up to 48 solenoid coils, different valve functions)	The decentralised arrangement of the modules and valve terminals with I-Port enables them to be mounted near the cylinders and actuators/sensors to be controlled. This allows the use of shorter air supply lines and sensor cables or possibly smaller valves, which saves costs.	Several CPX-CTEL masters can be combined in one CPX terminal, depending on the address capacity of the bus node. Example: • CPX-FB13 (512 I/O) • Max. 2 CPX-CTEL masters (256 I/O each) possible
Configuration			
Setting	Manual configuration		Automatic configuration
The precise number of I/O bytes made available is geared towards the requirements of the connected devices and the selected operating mode. The operating mode and configuration presetting of the CPX-CTEL master can be defined by the user. DIL switches are used for selecting the operating mode and making the setting for manual configuration. These DIL switches are not required during operation and are only accessible in unassembled condition.	With manual configuration (tool change mode), the number of inputs and outputs in the process image of the CPX system or higher-level fieldbus can be manually defined via the DIL switches.	The process image then always has the same number of bytes, regardless of the connected devices. The defined I/O length always applies to all four I-Ports (max. 8 bytes per I-Port).	With automatic configuration, the I/O length for each I-Port is individually determined and this value is used to select the appropriate or next highest configuration presetting.
Power supply for I-Port devices			
The CPX-CTEL master provides two separate power supplies for the connected devices: • One for operating the device and the inputs connected to it • One for outputs and valves connected to the device	The power supply for devices and inputs comes from the power supply for the electronics and sensors of the CPX terminal. The power supply for outputs and valves comes from the power supply	for the valves of the CPX terminal. The interlinking block with additional power supply enables a separate voltage supply for valves and outputs. This allows this supply voltage to be	switched off separately. In other words, the valves and outputs of the connected I-Port devices can be switched off separately without having to switch off the devices themselves.

Terminal CPX

Technical data – Interface CPX-CTEL-2

FESTO

The electrical interface CPX-CTEL-2... enables the connection of modules with IO-Link interface (IO-Link device) to the CPX terminal. The I/O data of the connected devices are transmitted to the connected CPX bus node and thus to the higher-order controller via fieldbus.

A maximum of two IO-Link devices can be connected to an electrical interface CPX-CTEL-2... via the corresponding M12 interfaces.

Application

IO-Link interface

The communication system IO-Link is used to exchange serial data from decentralised function modules (devices) at the field level. The electrical interface CPX-CTEL-2... provides two IO-Link interfaces to the

outside, on each of which one device can be connected. The connection type corresponds to a star topology, which means that only one device can be connected to each port.

The address space that the module makes available and assigns accordingly in the CPX system can be configured according to various presettings. Selection of the operating mode and

the setting for manual configuration takes place via the DIL switches. These DIL switches are not required during continuous operation and are only accessible in the disassembled state.

Restrictions

The interfaces (ports) of electrical interface CPX-CTEL-2... support the connection of IO-Link devices with few limitations.

- The process data length of the inputs and outputs is limited to 16 bytes per port for inputs and outputs

- The driver strength on the C/Q line is limited to 250 mA

- SIO mode is not supported

Power supply for devices

The electrical interface CPX-CTEL-2... provides two separate power supplies for the connected devices:

- For the operation of the device and the inputs connected to it
- For the outputs and valves that are connected to the device

The power supply for the devices and the inputs is supplied by the power supply for the electronics and sensors of the CPX terminal. The power supply for the outputs and valves is supplied by the power supply

for the valves of the CPX terminal. The interlinking block with additional supply ensures a separate the supply voltage for the valves and outputs. This means it is possible to disconnect this supply voltage

separately. The valves and outputs of the connected I-Port devices can therefore be disconnected separately without disconnecting the devices.

Control block CPX-CMXX

Technical data

FESTO

The control block CPX-CMXX is an intelligent module in the CPX terminal for controlling electric drive units. Individual axis and simple multi-axis applications can easily be implemented. Programming is not necessary. Configuration, parameterisation and commissioning of the application is easily achieved with the Festo Configuration Tool (FCT).

- Configuration of two axes groups with up to four axes each is possible
- There are 1024 position sets available per axes group
- Input or Teach-In of positions in specified set structure
- Parameterisation via Ethernet
- Communication protocol: FHPP-MAX, Festo handling and positioning profile for multi-axis movements.
- Control of drive units via CANopen

Control block CPX-CM-HPP

Technical data

FESTO

The control block CPX-CM-HPP is a module in the CPX terminal for controlling electric drives.

The control component is independent of the bus node used. This means that Festo's electric drive technology is compatible with all industrial communication interfaces.

The control block does not need to be programmed.

- Max. 4 individual electric axes can be controlled via CAN bus
- No programming required
- Standardised communication with the drives via the Festo Handling and Positioning Profile (FHPP)
- Quick configuration and diagnostics via the operator unit CPX-MMI
- Simple, flexible and cost-effective

Terminal CPX

Technical data – Input module, digital

FESTO

Function

Digital input modules enable the connection of two-wire and three-wire sensors (proximity sensors, inductive or capacitive sensors, etc). Depending on the connection block selected, the module supports various connection concepts with different numbers of sockets (single or double allocation).

Applications

- Input modules for 24 V DC sensor supply voltage
- PNP or NPN logic
- Supports connection blocks with M12, M8, Sub-D, Harax and terminal connection
- Module features can be parameterised
- The input module receives the voltage supply for the electronics and the sensors from the interlinking block
- Module protection and diagnostics through integrated electronic fuse protection

General technical data					
Type		CPX-4DE	CPX-8DE	CPX-8DE-D	CPX-8NDE
No. of inputs		4	8	8	8
Max. residual current of inputs per module [A]		0.7	1	0.7	0.7
Fuse protection		Internal electronic fuse for each module	Internal electronic fuse for each module	Internal electronic fuse for each channel	Internal electronic fuse for each module
Intrinsic current consumption at operating voltage [mA]		Typically 15			
Operating voltage	Nominal value [V DC]	24			
	Permissible range [V DC]	18 ... 30			
Electrical isolation	Channel – channel	No			
	Channel – internal bus	No			
Switching level	Signal 0 [V DC]	≤ 5			≥ 11
	Signal 1 [V DC]	≥ 11			≤ 5
Input debounce time [ms]		3 (0.1, 10, 20 parameterisable)			
Input characteristic curve		IEC 1131 Part 2			
Switching logic		Positive logic (PNP)			Negative logic (NPN)
LED displays	Group diagnostics	1	1	1	1
	Channel diagnostics	–	–	8	–
	Channel status	4	8	8	8
Diagnostics		Short circuit/overload per channel			
Parameterisation		• Module monitoring • Behaviour after short circuit • Input debounce time • Signal stretching time			
Protection class to EN 60529		Depending on connection block			
Temperature range	Operation [°C]	–5 ... +50			
	Storage/transport [°C]	–20 ... +70			
Materials		Reinforced polyamide, polycarbonate			
Grid dimension [mm]		50			
Dimensions (incl. interlinking block and connection block) W x L x H [mm]		50 x 107 x 50			
Weight [g]		38

FESTO

Function

Digital input modules enable the connection of two-wire and three-wire sensors (proximity sensors, inductive or capacitive sensors, etc.).

Depending on the connection block selected, the module supports various connection concepts with different numbers of sockets (single or double allocation).

Application

- Input modules for 24 V DC sensor supply voltage
- PNP logic
- Module features can be parameterised
- The input module receives the voltage supply for the electronics and the sensors from the interlinking block
- Module protection and diagnostics through integrated electronic fuse protection

General technical data				
Type		CPX-16DE	CPX-M-16DE-D	CPX-L-16DE
Number of inputs		16	16	16
Max. residual current of inputs per module		[A]	1.8	1.8
Intrinsic current consumption at operating voltage		[mA]	Typically 15	Typically 34
Fuse protection		Internal electronic fuse per module	Internal electronic fuse per channel pair, additional safety fuse	Internal electronic fuse per module
Nominal operating voltage		[V DC]	24	24
Operating voltage range		[V DC]	18 ... 30	18 ... 30
Electrical isolation	Channel – channel	No	No	No
	Channel – internal bus	No	No	No
Switching level	Signal 0	[V DC]	≤ 5	≤ 5
	Signal 1	[V DC]	≥ 11	≥ 15
Input debounce time		[ms]	3 (0.1 ms, 10 ms, 20 ms parameterisable)	
Input characteristic			IEC 1131-T2	IEC 1131-T2, type 01
Switching logic			Positive logic (PNP)	Positive logic (PNP)
LED displays	Group diagnostics		1	1

Technical data – Output module, digital

FESTO

Function

Digital outputs control actuators such as individual valves, hydraulic valves, heating controllers and many more. Separate circuits are created using an additional power supply. Parallel connection of the outputs of a module enables consuming devices to be controlled with up to 4 A.

Applications

- Output module for 24 V DC supply voltage
- PNP logic
- Module features can be parameterised
- The output module receives the voltage supply for the electronics and the outputs from the interlinking block
- Module protection and diagnostics through integrated electronic fuse protection in each channel

General technical data				
Type		CPX-4DA	CPX-8DA	CPX-8DA-H
No. of outputs		4	8	8
Max. power supply	Per module	4		8.4
	Per channel	1 (24 W lamp load, 4 channels can be connected in parallel)	0.5 (12 W lamp load, 8 channels can be connected in parallel)	2.1 (50 W lamp load), per channel pair
Fuse protection (short circuit)		Internal electronic fuse for each channel		
Module current consumption (voltage supply for electronics)		Typically 16		Typically 34
Operating voltage	Nominal value	24		
	Permissible range	18 ... 30		
Electrical isolation	Channel – channel	No		
	Channel – internal bus	Yes, using an intermediate supply		
Output characteristic curve		To IEC 1131-2		
Switching logic		Positive logic (PNP)

Terminal CPX

Technical data – Input/output module, digital

Application

- Digital multi I/O module for 24 V DC supply voltage
- Supports connection blocks with Sub-D, terminal connection and M12 connection (8-pin)
- As CPX-L with connection via spring-loaded terminals
- Module features can be parameterised
- The inputs receive the voltage supply for the electronics and the sensors from the interlinking block
- The outputs receive the voltage supply for the electronics and the outputs from the interlinking block
- Module protection and diagnostics through integrated electronic fuse protection for the sensor power supply and integrated electronic fuse protection in each output channel

Function

The multi I/O module controls devices with a high number of inputs and outputs per connection point. Since the module supports Sub-D connection blocks, consoles with pushbuttons and lamps can be connected to the terminal CPX using a minimal amount of installation space.

Up to 8 inputs and 8 outputs can be connected to one connection point with high protection to IP65.

Since the module supports the M12 connection block (8-pin), up to 4 cylinder/valve combinations with integrated sensors can be connected. Each cylinder/valve combination is supported by 2 inputs and 2 outputs per socket. It is therefore possible to control max. 2 solenoid coils and record signals from 2 sensors with a pre-assembled cable.

Two inputs on 2 sockets are bridged to provide support for the diagnostic module of the cylinder/valve combination. This means that 3 inputs and 2 outputs are available at 2 sockets.

As an alternative to the Sub-D and M12 connection block (8-pin) for installation with high protection to IP65, the terminal connection block produces an identical result for installation with IP20 protection – or with IP65/67 protection with additional cover.

Subordinate I/O modules with multi-pin plug connection (Sub-D plug or multi-pin cable for self-assembly) support the cost-effective and space-saving integration of critical installation areas such as energy chains or upstream functions.

Interlinking block	CPX-L-8DE-8DA	
	The module combines the 0 V potential of the power supply for electronics and sensors with the 0 V potential of the power supply for outputs in the CPX interlinking module.	If all poles of the outputs of an output module connected to the right of the input/output module are to be switched off, an appropriate interlinking block with additional power supply for outputs must be used to the right of the input/output module.

Terminal CPX

Technical data – Counter module, digital

Function

The counter module has two channels. Depending on the parameterisation, these can independently be used as counter inputs or as incremental value encoder inputs or SSI. The counter module additionally has one output per channel. The outputs can either be controlled by a counter channel or an incremental value encoder channel, i.e. through an event such as "Comparative value reached". Alternatively, outputs can also be controlled via process data.

Application

- Continuous counting
- One-off counting to count limit
- One-off counting to count limit, return to load value
- Periodic counting
- Measurement of frequencies
- Measurement of rotational speeds
- Measurement of duty cycle
- Measurement of position
- Measurement of speed
- Measurement with pulse generators and direction encoders
- Measurement with incremental encoders
- Measurement with SSI absolute encoders

Description

Applications

- | | | | |
|---|--|--|---|
| <ul style="list-style-type: none"> • Recording travel and speed of a conveyor • Position and speed synchronisation of conveyors and pick & place applications • Counting goods e.g. in packaging installations | <ul style="list-style-type: none"> • Systems for filling by weight and volume • Monitoring motor speeds • Measuring equipment for determining the position of axis systems (linear, rotational) | <ul style="list-style-type: none"> • Control of fast-switching valves • Control of the opening time of a valve • Activation of semiconductor relays | <ul style="list-style-type: none"> • Temperature monitoring and rotational speed control for drives • Change of direction in fast drives • Control of motors with pulse-width modulation (PWM) |

Technical data – Analogue module for inputs

FESTO

Function

Analogue modules control devices with a standardised analogue interface such as sensors for pressure, temperature, flow rate, filling level, etc.

The analogue module supports various connection concepts with different numbers of sockets or terminals as appropriate to the connection block selected.

Application

- Analogue module for 0 ... 10 V, 0 ... 20 mA or 4 ... 20 mA
- Supports connection blocks with Sub-D, terminal connection and M12 connection
- Analogue module features can be parameterised
- Different data formats available
- Operation with and without galvanic isolation possible
- The analogue module receives the voltage supply for the electronics and the sensors from the interlinking block
- Analogue module protection and diagnostics through integrated electronic fuse protection

Terminal CPX

Technical data – Analogue input module with pressure sensors

FESTO

Function

The pressure input modules enable a maximum of four pressures to be processed. The internal measured value of the sensor (analogue value with 10 bit resolution) is converted into an internal numerical format as appropriate to the parameterisation and made available to the bus node as an image table. It is also possible to combine two channels into one differential pressure channel.

Applications

- Measuring range 0 ... 10 bar or –1 ... +1 bar
- Choice of units of measurement
- Processing of max. four pressures per module
- Pressure indication via LCD display
- Direct connection via QS4 push-in connectors
- Error message via CPX
- Channel-oriented diagnostics

General technical data				
Type			CPX-4AE-P-B2	CPX-4AE-P-D10
No. of analogue inputs			4	
Pneumatic connection			QS-4	
Nominal operating voltage			[V DC]	24
Operating voltage range			[V DC]	18...30
Intrinsic current consumption			[mA]	Typically 50
Measured variable			4x relative or 2x differential pressure measurement	
Displayable units			• kPa • mbar • psi	
Pressure measuring range	Starting value	[bar]	–1	0
	Final value	[bar]	1	10
Internal cycle time			[ms]	5
Data format			• 15 bits + prefix • Binary representation in mbar, kPa, psi	
LED displays			Group diagnostics	
Diagnostics			• Limit value violation per channel • Parameterisation error • Sensor limit per channel	
Parameterisation			• Diagnostic delay per channel • Hysteresis per module • Unit of measurement • Measured value smoothing per channel • Limit value monitoring per channel • Sensor limit per channel • Measurement of relative/differential pressure	
Protection class to EN 60529			IP65/IP67	
Operating medium			Compressed air in accordance with ISO 8573-1:2010 [7:4:4]	
Note on operating/pilot medium			Operation with lubricated medium possible (in which case lubricated operation will always be required)	
Ambient temperature			[°C]	–5... 50
Storage temperature			[°C]	–20 ... 70
Temperature of medium			[°C]	0... 50
Note on materials			RoHS-compliant	
Materials			Reinforced polyamide, polycarbonate	
Grid dimension			[mm]	50
Dimensions (incl. interlinking block) W x L x H			[mm]	50 x 107 x 55
Weight			[g]	112

Note

Extreme pneumatic conditions, for example high cycle frequency with large pressure amplitudes, can damage the sensors.

Technical data – Analogue module for temperature inputs

FESTO

Function

The CPX-PT100 analogue input module with 4 channels for temperature measurement enables the connection of up to 4 temperature sensors of the type PT100-PT1000, Ni100-Ni1000, etc. The temperature module supports various connection concepts with different numbers of sockets or terminals as appropriate to the connection block selected.

Applications

- Temperature module for temperature sensors PT100, PT200, PT500, PT1000, Ni100, Ni120, Ni500, Ni1000
- Supports connection blocks with M12, Harax and terminal connection
- Temperature module features can be parameterised
- 2-wire, 3-wire and 4-wire connection
- The temperature module is provided with voltage supply for the electronics and the sensors via the interlinking block
- Temperature module protection and diagnostics through integrated electronic fuse protection

General technical data			
Type			CPX-4AE-T
			Temperature input
No. of analogue inputs			Choice of 2 or 4
Max. power supply per module		[A]	0.7
Fuse protection			Internal electronic fuse for sensor supply
Current consumption from 24 V sensor supply (quiescent current)		[mA]	Typically 50
Supply voltage of sensors		[V DC]	24 ±25%
Sensor type (parameterisable for each channel by means of DIL switch)			PT100, PT200, PT500, PT1000 Ni100, Ni120, Ni500, Ni1000
Temperature range	Pt standard	[°C]	–200 ... +850
	Pt climatic	[°C]	–120 ... +130
	Ni	[°C]	–60 ... +180
Sensor connection technology			2-wire, 3-wire and 4-wire technology
Resolution			15 bit + prefix
Operating error limit relative to input range			±0.06
Basic error limit (25 °C)	Standard	[K]	±0.6
	Pt climatic	[K]	±0.2
Temperature errors relative to input range			±0.001
Linearity errors (no software scaling)			±0.02
Repetition accuracy (at 25 °C)			±0.05
Max. line resistance per wire			10
Max. permissible input voltage			±30
Cycle time (module)			≤ 250

Terminal CPX

Technical data – Analogue module for thermocoupler

FESTO

Function

The CPX-4AE-TC analogue input module with four channels for temperature measurement enables up to four thermocoupler sensors to be connected. The channels feature wire break and short circuit detection. If no cold junction compensation sensor is being used, an internal theoretical value of 25 °C can be used (accuracy is impaired).

Applications

- Supports connection blocks with M12 and terminal connection
- Temperature module features can be parameterised
- 2-wire connection
- 2-wire connection for a PT1000 sensor for cold junction compensation
- The temperature module is provided with voltage supply for the electronics and the sensors via the interlinking block
- Temperature module protection and diagnostics through integrated electronic fuse protection

General technical data		
Type		CPX-4AE-TC
		Temperature input
No. of analogue inputs		4
Fuse protection (short circuit)		Internal electronic fuse for each channel
Nominal operating voltage	[V DC]	24
Operating voltage range	[V DC]	18 ... 30
Sensor type (parameterisable for each channel by means of software)		• Type B +400 ... +1,820 °C, 8 µV/°C • Type E –270 ... +900 °C, 60 µV/°C • Type J –200 ... +1,200 °C, 51 µV/°C • Type K –200 ... +1,370 °C, 40 µV/°C • Type N –200 ... +1,300 °C, 38 µV/°C • Type R 0 ... +1,760 °C, 12 µV/°C • Type S 0 ... +1,760 °C, 11 µV/°C • Type T –200 ... +400 °C, 40 µV/°C
Sensor connection technology		2-wire technology
Operating error limit relative to ambient temperature	[%]	Max. ±0.6
Basic error limit (at 25 °C)	[%]	Max. ±0.4
Repetition accuracy (at 25 °C)	[%]	±0.05
Max. line resistance per wire	[Ω]	10
Max. residual current per module	[mA]	30
Max. permissible input voltage	[V]	±30
Internal cycle time (module)	[ms]	250

Terminal CPX

Technical data – Analogue module for outputs

FESTO

Function

Analogue modules control devices with a standard analogue interface such as proportional valves, etc. The analogue module supports various connection concepts with different numbers of sockets or terminals as appropriate to the connection block selected.

Applications

- Analogue module for 0 ... 10 V, 0 ... 20 mA or 4 ... 20 mA
- Supports connection blocks with M12, Sub-D and terminal connection
- Analogue module features can be parameterised
- Different data formats available
- Operation with and without galvanic isolation possible
- The analogue module receives the voltage supply for the electronics and the actuators from the interlinking block
- Analogue module protection and diagnostics through integrated electronic fuse protection

General technical data				
Type			CPX-2AA-U-I	
			Voltage output	Current output
No. of analogue outputs			2

Terminal CPX

Technical data – PROFIsafe shut-off module

FESTO

Function

The PROFIsafe shut-off module interrupts the contact rails of the interlinking block for valves and outputs. The supply voltage for valves can be switched by the module within the CPX terminal and via a connection block to two consuming devices. Actuation takes place via the fieldbus node (PROFINET) of the CPX terminal.

Scope of application

- Output module for 24 V DC supply voltage
- Shut-off module for supply voltage for valves
- Can only be used with PROFINET or PROFIBUS bus node
- The shut-off module is supplied with voltage for the electronics and the outputs by the interlinking block
- The outputs are supplied from the power supply for valves (V_{Valves})

General technical data				
Type				CPX-FVDA-P2
Number of outputs				2
Note on outputs				1 internal channel for shutting off the supply voltage for valves
				2 external outputs
Max. power supply	Per module	[A]	5	
	Per channel	[A]	1.5	
Fuse protection (short circuit)				Internal electronic fuse for each channel
Current consumption of module		[mA]	Typ. 65 (power supply for valves)	
		[mA]	Typ. 25 (power supply for electronics)	
Operating voltage	Nominal value	[V DC]	24	
	Permissible range	[V DC]	20.4 ... 28.8	
Voltage drop per channel		[V]	0.6	
Residual ripple		[Vss]	2 within voltage range	
Load capacity to FE		[nF]	400	
Max. response time to shut-off command		[ms]	23	
Electrical isolation	Channel – channel		No	
	Channel – internal bus		Yes, using an intermediate supply	
Switching logic	Outputs		P-M switching	
Safety integrity level				Safe shut off, SIL 3
Performance level				Safe shut off/category 3, performance level e
Failure rate per hour (PFH)				1.0×10^{-9}
Certificate issuing authority				01/205/50294/13
LED displays	Group diagnostics		1

Terminal CPX

Technical data – End plate with system power supply

Function

End plates form the outer edge of the CPX terminal.

The earth connection and mounting holes for wall or H-rail mounting are located on the left end plate.

The end plate with system power supply has contact rails from which the other CPX components on the interlinking modules are supplied with power.

Application

- 24 V DC supply voltage for the electronics of the CPX terminal
- 24 V DC supply voltage for inputs
- 24 V DC supply voltage for valves
- 24 V DC supply voltage for outputs

General technical data		
Electrical connection		Plug, 7-pin

Terminal CPX

Technical data – End plate with extension

Function

End plates form the outer edge of the CPX terminal.

The earth connection and mounting holes for wall or H-rail mounting are located on the left end plates.

The end plates with extension enable the CPX terminal to be separated into two interconnected terminals. Control is provided via a common bus node or control block.

Application

- Separation of long CPX terminals into two shorter units
- Adaptation for installation in a control cabinet

Note

Note the following points about the interlinking block

CPX-M-GE-EV-S-7/8-CIP-4P:

- Must be mounted as the first module to the right of the left-hand end plate

- Only permitted as an interlinking block to a bus node
- The functional earth (FE) must be connected via the left-hand end plate

Function

Interlinking blocks ensure the electrical supply of all other CPX modules. They have contact rails, from which the other CPX components on the interlinking modules are supplied with current.

Internal division of the power supply makes it possible to switch off specific areas of the sensors and actuators individually.

Applications

- All voltages are fed through to the next module by means of an interlinking system.
- The connected electronics module for inputs/outputs or bus node taps off the required voltage.

Terminal CPX

Technical data – Pneumatic interface VMPA-FB

FESTO

Function

The pneumatic interface VMPA-FB establishes the electromechanical connection between the CPX terminal and the valve terminal MPA-S. The signals from the bus node are forwarded to the control electronics in the electrical modules of the valve terminal MPA-S via the integrated CPX bus. The bus signal for activation of the solenoid coils is converted in the electronics module for max. 8 coils. From a technical point of view, the individual MPA pneumatic modules each represent a separate electrical module with digital outputs. Valves, which are galvanically isolated, can be supplied with power via the interlinking block CPX-GE-EV-V.

Applications

- Interface to the valve terminal MPA-S
- Max. 128 solenoid coils
- Features of the electronics module of the valve terminal MPA-S can be parameterised, for example status of the solenoid coils in the event of fieldbus communication being interrupted (fail-safe), individual channel diagnostics can be activated, condition monitoring can be activated individually for each valve
- The pneumatic interface receives the voltage for the electronics and the supply voltage for the valves from the left-hand interlinking block and feeds them through to the electronics modules of the valve terminal MPA-S
- Electronics modules of the valve terminal MPA-S:
 - Undervoltage of valves
 - Short circuit of valves
 - Open load of valves
 - Counter preset reached in condition monitoring

Terminal CPX

Technical data – Pneumatic interface VMPAL

Function

The pneumatic interface VMPAL establishes the electromechanical connection between the terminal CPX and the valve terminal MPA-L.

The bus signal for actuating the solenoid coils is converted in the pneumatic interface for the entire valve terminal.

The interlinking within the valve terminal is identical with the interlinking with multi-pin plug connections.

Application

- Actuation of the valve terminal MPA-L
- Max. 32 solenoid coils
- The pneumatic interface receives the voltage for the electronics and the supply voltage for the valves from the left-hand interlinking block and feeds them through to the electric modules of the valve terminal MPA-L

General technical data		
Type	VMPAL-EPL-CPX	
Number of solenoid coils		32

Technical data – Pneumatic interface VMPAF

Function

The pneumatic interface VMPAF establishes the electromechanical connection between the CPX terminal and the valve terminal MPA-F. The signals from the bus node are forwarded to the control electronics in the electrical modules of the valve terminal MPA-F via the integrated CPX bus. The bus signal for activation of the solenoid coils is converted in the electronics module for max. 8 coils. From a technical point of view, the individual MPA-F pneumatic modules each represent a separate electrical module with digital outputs. Valves, which are galvanically isolated, can be supplied with power via the interlinking block CPX-GE-EV-V.

Applications

- Interface to the valve terminal MPA-F
- Max. 128 solenoid coils
- Electronics module can be parameterised, for example status of the solenoid coils in the event of fieldbus communication being interrupted (fail-safe), individual channel diagnostics, condition monitoring can be activated individually for each valve
- In the version with pressure sensor, display of the numerical pressure value, unit and adherence to setpoint value. Parameterisation via PLC or handheld unit (CPX-MMI)
- Voltage for electronics and valves supplied from the left-hand interlinking block
- Electronics modules of the valve terminal MPA-F:
 - Undervoltage of valves
 - Short circuit of valves
 - Open load of valves
 - Counter preset reached in condition monitoring

Terminal CPX

Technical data – Pneumatic interface VTSA/VTSA-F

FESTO

Function

The pneumatic interface VTSA provides the electromechanical connection between the terminal CPX and valve terminal VTSA/VTSA-F.

A complete pneumatic control loop system (FB-valve-drive-sensor-FB) can therefore be connected to the fieldbus using the input modules of the terminal CPX.

Different circuits for valves and electrical outputs are implemented using an additional power supply. The integrated valve diagnostic functions enable the causes of errors to be found quickly, therefore increasing system availability.

Application

- Interface to the valve terminal VTSA and VTSA-F
- Max. 32 solenoid coils
- Address space allocation (configuration) of valve terminals can be set using integrated DIL switches
- Properties of the pneumatic interface can be parameterised, e.g. status of the solenoid coil when fieldbus communication is interrupted (failsafe)
- The pneumatic interface receives the voltage for the electronics and the supply voltage for the valves from the left-hand interlinking block
- Detection of missing solenoid coils and short circuit monitoring for the valves

General technical data			
Number of solenoid coils			32
Electrical actuation			Fieldbus
Electrical connection			Via CPX
Diagnostics			Undervoltage at valves
Parameterisation			• Failsafe per channel • Forces per channel • Idle mode per channel • Module monitoring
LED displays			• 1 Group diagnostics • Channel status (on each valve)
Fuse protection (short circuit)			Internal electronic fuse per valve output
Electrical isolation channel – internal bus			Yes, when using an additional power supply for the valves
Nominal operating voltage		[V DC]	24
Operating voltage range		[V DC]	21.6 ... 26.4
Intrinsic current consumption at nominal operating voltage	Electronic components	[mA]	Typically 15
	Valves	[mA]	Typically 50
Max. power supply per channel		[A]	0.2

Technical data – Pneumatic interface MIDI/MAXI

FESTO

Function

The pneumatic interface MIDI/MAXI connects the valve terminal MIDI/MAXI to the supported fieldbus protocols of the CPX terminal. A complete pneumatic control loop system (FB-valve-drive-sensor-FB) can therefore be connected to the fieldbus using the input modules of the CPX terminal. Different circuits for valves and electrical outputs are implemented using an additional power supply. The integrated valve diagnostic functions enable the causes of errors to be found quickly, therefore increasing system availability.

Applications

- Interface to valve terminals MIDI/MAXI
- Max. 26 solenoid coils
- Address space allocation (configuration) of valve terminals can be set using integrated DIL switches
- Pneumatic interface features can be parameterised, for example status of the solenoid coils in the event of fieldbus communication being interrupted (fail-safe)
- The pneumatic interface receives the voltage for the electronics and the supply voltage for the valves from the left-hand interlinking block

Technical data – Pneumatic interface CPA

Function

The pneumatic interface CPA connects the valve terminal CPA to the supported fieldbus protocols of the CPX terminal. A complete pneumatic control loop system (FB-valve-drive-sensor-FB) can therefore be connected to the fieldbus using the input modules of the CPX terminal. Different circuits for valves and electrical outputs are implemented using an additional power supply. The integrated valve diagnostic functions enable the causes of errors to be found quickly, therefore increasing system availability.

Applications

- Interface to valve terminals CPA10 and CPA14
- Max. 22 solenoid coils
- Address space allocation (configuration) of valve terminals can be set using integrated DIL switches
- Pneumatic interface features can be parameterised, for example status of the solenoid coils in the event of fieldbus communication being interrupted (fail-safe)
- The pneumatic interface receives the voltage for the electronics and the supply voltage for the valves from the left-hand interlinking block
- Detection of missing solenoid coils and short circuit monitoring for the valves

General technical data			
No. of solenoid coils			22
Max. power supply	Per module	[A]	4
	Per channel	[A]	0.2

	Bus connection M12 adapter (B-coded) for PROFIBUS DP		533118	FBA-2-M12-5POL-RK
	Micro Style bus connection, 2xM12 for DeviceNet/CANopen		525632	FBA-2-M12-5POL
	Socket for Micro Style connection, M12		18324	FBSD-GD-9-5POL
	Plug for Micro Style connection, M12		175380	FBS-M12-5GS-PG9
	M12x1 bus connection, 4-pin (D-coded) for Ethernet		543109	NECU-M-S-D12G4-C2-ET
	Connection block, Sub-D socket, 9-pin, plug 7/8", 5-pin for DeviceNet		571052	CPX-AB-1-7/8-DN
	Connection block M12 adapter (B-coded) for PROFIBUS DP		541519	CPX-AB-2-M12-RK-DP
	Connection block M12 adapter (B-coded) for INTERBUS		534505	CPX-AB-2-M12-RK-IB
	Socket M12x1, 5-pin, straight, for self-assembly of a connecting cable for FBA-2-M12-5POL-RK and CPX-AB-2-M12-RK-DP		1067905	NECU-M-B12G5-C2-PB
	Plug M12x1, 5-pin, straight, for self-assembly of a connecting cable for FBA-2-M12-5POL-RK and CPX-AB-2-M12-RK-DP		1066354	NECU-M-S-B12G5-C2-PB
	Open Style bus connection for 5-pin terminal strip for DeviceNet/CANopen		525634	FBA-1-SL-5POL
	Terminal strip for Open Style connection, 5-pin		525635	FBSD-KL-2x5POL
	Screw terminal bus connection for CC-Link		197962	FBA-1-KL-5POL
	RJ45/plug		534494	FBS-RJ45-8-GS
	RJ45 plug, 8-pin, push-pull		552000	FBS-RJ45-PP-GS
	SCRJ plug, 2-pin, push-pull, for CPX-M-FB35		571017	FBS-SCRJ-PP-GS
	Socket/spring-loaded terminal, 5-pin, AIDA push-pull		563059	NECU-M-PPG5-C1
	Plug for CAN-Bus interface, Sub-D, 9-pin, without terminating resistor		533783	FBS-SUB-9-WS-CO-K

Ordering data – Accessories				
Designation			Part No.	Type
Plug connectors and accessories – Power supply				
	Plug socket for mains connection M18, straight	For 1.5 mm ²	18493	NTSD-GD-9
		For 2.5 mm ²	18526	NTSD-GD-13.5
	Plug socket for mains connection M18, angled	For 1.5 mm ²	18527	NTSD-WD-9
		For 2.5 mm ²	533119	NTSD-WD-11
	Power supply socket	7/8" connection, 5-pin	543107	NECU-G78G5-C2
		7/8" connection, 4-pin	543108	NECU-G78G4-C2
	Angled socket, 5-pin – Open cable end, 5-pin	2 m	573855	NEBU-G78W5-K-2-N-LE5
	Connection socket AIDA push-pull, spring-loaded terminal	5-pin	563059	NECU-M-PPG5-C1
	Straight plug, spring-loaded terminal, for end plate left-hand with system supply	7-pin	576319	NECU-L3G7-C1
Hood				
	Mounting rail for securing the cover	1,000 mm	572256	CAFC-X1-S
	Mounting kit for CPX cover		572257	CAFC-X1-BE
	Hood section for CPX terminal including mounting attachments for connecting several hood sections in series	200 mm	572258	CAFC-X1-GAL-200
		300 mm	572259	CAFC-X1-GAL-300
Screws				
	Screws for mounting the bus node/connection block on a plastic interlinking block	Bus node/metal connection block	550218	CPX-DPT-30X32-S-4X
	Screws for mounting the bus node/connection block on a metal interlinking block	Bus node/plastic connection block	550219	CPX-M-M3x22-4x
		Bus node/metal connection block	550216	CPX-M-M3x22-S-4x
	Screws for attaching an inscription label holder to the bus node (CPX-FB33, CPX-M-FB34, CPX-M-FB35)	12 pieces	550222	CPX-M-M2,5X8-12X
